Phanerozoic Stromatolites II:

Phanerozoic Stromatolites II Janine Bertrand-Sarfati, C. Monty, 2012-12-06 Precambrian stromatolites have received in depth consideration from geologists and paleontologists they were indeed searching for biosedimentary structures that were sufficiently characteristic and widely distributed to be considered as useful tools for stratigraphic correlation Silicified stromatolites are also of interest as they contain preserved traces of ancient life Calcareous Phanerozoic stromatolites have not received very much attention from geologists Logan's too schematic morphological classification of 1964 was not so helpful to the knowledge of Phanerozoic stromatolites because neither their morphology nor their microstructure were studied in the same detail in which Proterozoic stromatolites have now been described We therefore know little about the Phanerozoic stromatolites which do however show an interesting range of diversification A major questions still remaining to be answered include the history of stromatolite development and whether their morphology has evolved in addition to detailed information concerning Cenozoic nonmarine stromatolites which precipitate carbonate and the Recent giant stromatolites which trap particles For these reasons Claude Monty in 1981 launched the first volume of what was going to be a series on Phanerozoic stromatolites in order to describe their morphology microstructure and paleoecology and to present them in their stratigraphic context

Sedimentology James L. Best, C. R. Fielding, Ian Jarvis, Peter Mozley, 2009-05-11 Sedimentology has seen many significant advances and changes over the past 40 years ranging from facies modelling to sequence stratigraphy chemostratigraphy to basin analysis and the integration of studies of physical chemical and increasingly biological processes in the interpretation and prediction of sedimentary environments and products The subject is becoming ever more interdisciplinary and applied and now has far more links to other physical sciences Research and debate are continuing afresh as we move into this new interdisciplinary phase and promise many developments and increased uses of our subject Now seemed a good time to publish a series of review papers concerning some key current areas of research We hope that these papers will provide comprehensive starting points for those wishing to become acquainted with an area act as stimuli for debate and provide awareness and ideas for future research avenues No issue of this sort can of course ever be truly comprehensive in its coverage these reviews concern only selected snippets from the wide scope of sedimentology and each has of necessity been selective in its own area

Finkelstein, Lisa Park Boush, Sila Pla-Pueyo, 2021-04-24 This book honors the career of Professor Elizabeth Gierlowski Kordesch who was a pioneer and leader in the field of limnogeology since the 1980s Her work was instrumental in guiding students and professionals in the field until her untimely death in 2016 This collection of chapters was written by her colleagues and students and recognize the important role that Professor Gierlowski Kordesch had in advancing the field of limnogeology The chapters show the breadth of her reach as these have been contributed from virtually every continent This book will be a primary reference for scientists professionals and graduate students who are interested in the latest advances

Swart, Gregor P. Eberli, Judith A. McKenzie, 2012-04-10 This special publication Perspectives in Carbonate Geology is a collection of papers most of which were presented at a symposium to honor the 80th birthday of Bob Ginsburg at the meeting of Geological Society of America in Salt Lake City in 2005 The majority of the papers in this publication are connected with the study of modern carbonate sediments Bob Ginsburg pioneered the concept of comparative sedimentology that is using the modern to compare to and relate to and understand the ancient These studies are concerned with Bob's areas of passion coral reefs and sea level submarine cementation and formation of beach rock surface sediments on Great Bahama Bank and other platforms origin of ooids coastal sediments formation of stromatolites impact of storms on sediments and the formation of dolomite The remainder of the papers apply the study of modern environments and sedimentary processes to ancient sediments Recent other publications of the International Association of Sedimentologists

Early Organic Evolution Manfred Schidlowski, Stjepko Golubic, Michael M. Kimberley, David M. McKirdy, Philip A. Trudinger, 2012-12-06 This volume is the final outcome of a conference designed to wrap up IOCP Project 157 Early Organic Evolution and Mineral and Energy Resources after a decade of prolific activity The picturesque solitude of Maria Laach Abbey in the Eifel Mountains FRO provided the appropriate setting for a conclave of some 80 specialists from the various walks of the field who during the week of Sept 19-23 1988 strived hard to define the state of the art in the principal segments of this Earth Science frontier The following pages contain the essence of the conference transactions giving a vivid cross section of the activities pursued by IOCP Project 157 during its final years The coverage of topics is not necessarily complete but rather eclectic in part With regard to single papers dealing with modern analogues of ancient processes the book title might even be considered a grave misnomer Nevertheless all contributions relate to the subject in the widest sense and the reader should be reminded that much of the heterogeneity reflected by the volume derives from the fact that it is primarily a research report from a highly interdisciplinary field rather than a textbook
