Phd Trap:

A Single Trapped Rydberg Ion Gerard Higgins, 2019-10-22 Systems of trapped ions and systems of ultracold Rydberg atoms are used at the forefront of quantum physics research and they make strong contenders as platforms for quantum technologies Trapped Rydberg ions are a new hybrid technology envisaged to have both the exquisite control of trapped ion systems and the strong interactions of Rydberg atoms In this work a single trapped Rydberg ion is experimentally investigated A trapped strontium ion is excited to Rydberg states using two ultraviolet lasers Effects of the strong trapping electric fields on the highly sensitive Rydberg ion are studied After mitigating unwanted trap effects the ion is coherently excited to Rydberg states and a quantum gate is demonstrated This thesis lays much of the experimental groundwork for research using this novel system

Fast Gates and Mixed-Species Entanglement with Trapped Ions Vera M. Schäfer, 2020-03-04 Quantum logic gates are the crucial information processing operation of quantumcomputers Two crucial performance metrics for logic gates are their precision andspeed Quantum processors based on trapped ions have always been the touchstonefor gate precision but have suffered from slow speed relative to other quantum logicplatforms such as solid state systems This thesis shows that it is possible to acceleratethe logic clock speed from kHz to MHz speeds whilst maintaining a precision of99.8% This is almost as high as the world record for conventional trapped ion gates but more than 20 times faster It also demonstrates entanglement generation in a time 480ns shorter than the natural timescale of the ions motion in the trap whichstarts to probe an interesting new regime of ion trap physics In separate experiments some of the first mixed species quantum logic gates areperformed both between two different elements and between different isotopes The mixed isotope gate is used to make the first test of the quantum mechanical Bellinequality between two different species of isolated atoms

Changing Doctoral Degrees Keith Allan Noble, 1994 Doctoral degrees have been a part of higher education ever since the first was conferred in Paris in around 1150

It is remarkable that this degree has survived and thrived for over eight centuries without significant change. Keith Allan Noble provides a concise international summary of the past and present of doctoral degrees and predicts possible future developments based on a study involving 67 scholars from Australia, Canada, Britain, and the USA. He examines the strengths and weaknesses of both traditional and non-traditional doctoral programmes and concludes with pragmatic recommendations suggesting how doctoral programmes should change. *Changing Doctoral Degrees* should be of interest to academics supervising doctoral candidates and for scholars researching higher education.

Economic Inequality - Trends, Traps and Trade-offs Medani P. Bhandari, Shvindina Hanna, 2022-09-01. The book *Economic Inequality: Trends, Traps and Trade-offs* presents the unexplored issues of economic inequality, including case studies of various countries. Inequality is a chronic divisive factor of society. It is well known that inequalities such as economic, social, cultural, religious, geographical, etc. have been omnipresent in human society. Inequalities can be found within each family, each community, and each nation, and thus globally. Inequality is a major cause of political, economic, social instability and creates crisis and conflict within society. A major cause of inequality is unequal, uneven, biased, power-centric distributions of human economic, social, political, cultural, and spiritual human necessities. The edited book examines the major parameters of the socio-economic issues of inequality and focuses on the key economic issues of inequality, namely income and wealth distribution, equity, equality of outcome, and equality of opportunities. Economic inequality is measured by wealth, income, disproportions in distribution, and consumption patterns in a specific area. Mostly, inequality is measured using various statistical tools, including the Gini Coefficient, inequality-adjusted human development index, 20/20 ratio, Palma ratio, Hoover index, Galt score, Coefficient of variation, Theil index, wage share, etc. However, not all income can be measured by these tools. By using case studies, this book encourages us to reframe economic development through the lens of growing inequalities and disparities. Economic growth per se is disproportional, and the efforts of scholars, practitioners, and policymakers should be directed to empower the marginalized of society in a way that no one should be left behind. Symmetry And Modern Physics: Yang Retirement Symposium Alfred Scharff Goldhaber, R. Shrock, John Smith, George Sterman, Peter Van Nieuwenhuizen, William Weisberger, 2003-09-11. C. N. Yang, one of the greatest physicists of the 20th Century, was awarded the Nobel Prize in 1957 jointly with T. D. Lee for their investigation of the relationship parity symmetry between left and right-handed states, leading to a discovery that astounded the world of physics: the nonconservation of parity by elementary particles and their reactions. With R. L. Mills, he created the concept of non-abelian gauge theories, the foundation of the modern description of elementary particles and forces. Professor Yang has worked on a wide range of subjects in physics, but his abiding interests have been symmetry, principles of particle physics, and statistical mechanics. In 1999, a symposium was held at the State University of New York at Stony Brook to mark the retirement of C. N. Yang as Einstein Professor and Director of the Institute for Theoretical Physics and to celebrate his many achievements. A noteworthy selection of the papers presented at the symposium appears in this invaluable volume in
