Phenomenology and the Natural Sciences Joseph J. Kockelmans, Theodore J. Kisiel, 1970

Philosophy's Nature:

Husserl's Phenomenology, Natural Science, and Metaphysics Emiliano Trizio, 2020-08-31 This book offers a systematic interpretation of the relation between natural science and metaphysics in Husserl's phenomenology. It shows that Husserl's account of scientific knowledge is a radical alternative to established methods and frameworks in contemporary philosophy of science. The author's interpretation of Husserl's philosophy offers a critical reconstruction of the historical context from which his phenomenological approach developed as well as new interpretations of key Husserlian concepts such as metaphysics, idealization, life-world, objectivism, crisis of the sciences, and historicity. The development of Husserl's philosophical project is marked by the tension between natural science and transcendental phenomenology. While natural science provides a paradigmatic case of the way in which transcendental phenomenology, ontology, empirical science, and metaphysics can be articulated, it has also been the object of philosophical misunderstandings that have determined the current cultural and philosophical crisis. This book demonstrates the ways in which Husserl shows that our conceptions of philosophy and of nature are inseparable. *Philosophy's Nature* will appeal to scholars and advanced students who are interested in Husserl and the relations between phenomenology, natural science, and metaphysics.

Ideas for a

Hermeneutic Phenomenology of the Natural Sciences J.J. Kockelmans, 2012-12-06 This book is a methodical and systematic presentation of basic ontological issues that must be raised with respect to the meaning and function of natural science. The ontological issues are discussed from a hermeneutic phenomenological point of view. In addition, the book contains critical discussions of basic themes raised by Carnap, Hempel, Stegmüller, Kuhn, Lakatos, Hintikka, Popper, van Fraassen, Heelan, and Kisiel. One of the basic theses developed in the book is that logical, epistemological, and methodological issues pertinent to the natural sciences should be complemented by ontological issues that focus mainly on meaning and truth. The book also contains one chapter on the implications of the ontological ideas presented for the history of the natural sciences.

Ideas for a Hermeneutic Phenomenology of the Natural Sciences J.J. Kockelmans, 2012-10-27 *Ideas for a Hermeneutic Phenomenology of Natural Sciences* published in 1993 as volume 15 of this series comprised mainly ontological reflections on the natural sciences. That book explained why the natural sciences must be considered inherently interpretive in character and clarified the conditions under which scientific interpretations are legitimate and may be called true. This companion volume focuses on methodological issues. Its first part elucidates the methodical hermeneutics developed in the 19th century by Boeckh, Birt, Dilthey, and others. Its second part, through the use of concrete examples drawn from modern physics as it unfolded from Copernicus to Maxwell, clarifies and proves the main points of the ontologico-hermeneutical conception of the sciences elaborated in the earlier volume. It thereby both illuminates the most important problems confronting an ontologico-phenomenological approach to the natural sciences and offers an alternative to Kuhn's conception of the historical

Contemporary philosophy seems a great swirling almost chaos Every situation must seem so at the time probably because philosophy itself resists structuration and because personal and political factors within as well as without the discipline must fade in order for the genuinely philosophical merits of performances to be assessed Nevertheless some remarks can still be made to situate the present volume For example at least half of philosophy on planet Earth is today pursued in North America which is not to say that this portion is any less internally incoherent than the whole of which it thus becomes the largest part and the present volume is North American Incidentally the recognition of culturally geographic traditions and tendencies now implies that striving for cross cultural if not trans cultural philosophical validity has failed or ceased Rather it merely recognizes a significant aspect relevant from the historical point of view Episteme Aesthetics Ethics Etc mology Analytic Philosophy Marxism Existentialism Etc Figure 1 There are two main ways in which philosophical developments are classified One is in terms of tendencies movements and schools of thought and the other is in terms of traditional sub disciplines When there is little contention among schools the predominant way is in terms of sub disciplines such as aesthetics ethics politics etc Today this mode of classification can be seen to intersect with that in terms of movements and tendencies both of which are represented in the above chart Phenomenology and the Natural Sciences , 1970

Goethe's Way of Science David Seamon, Arthur Zajonc, 1998-04-02 Though best known for his superlative poetry and plays Johann Wolfgang von Goethe 1749 1832 also produced a sizable body of scientific work that focused on such diverse topics as plants color clouds weather and geology Goethe's way of science is highly unusual because it seeks to draw together the intuitive awareness of art with the rigorous observation and thinking of science Written by major scholars and practitioners of Goethean science today this book considers the philosophical foundations of Goethe's approach and applies the method to the real world of nature including studies of plants animals and the movement of water Part I discusses the philosophical foundations of the approach and clarifies its epistemology and methodology Part II applies the method to the real world of nature and Part III examines the future of Goethean science and emphasizes its great value for better understanding and caring for the natural environment *Edmund Husserl* Edmund Husserl, 1980-07-31 There is no author's introduction to *Phenomenology and the Foundations of the Sciences* either as published here in the first English translation or in the standard German edition because its proper introduction is its companion volume *General Introduction to Pure Phenomenology* 2 The latter is the first book of Edmund Husserl's larger work *Ideas Toward a Pure Phenomenology and Phenomenological Philosophy* and is commonly referred to as *Ideas I* or *Ideen I* The former is commonly called *Ideen III* Between these two parts of the whole stands a third *Phenomenological Investigations of Constitution* generally known as *Ideen II* In this introduction the Roman numeral designations will be used as well as the abbreviation PFS for the translation at hand In many translation projects there is an initial problem of establishing the text to be translated That problem

confronts translators of the books of Husserl's Ideas in different ways. The Ideas was written in 1912 during Husserl's years in Göttingen. 1901-1916 Books I and II were extensively revised over nearly two decades and the changes were incorporated by the editors into the texts of the Husserliana editions of 1950 and 1952 respectively. Manuscripts of the various reworkings of the texts are preserved in the Husserl Archives but for those unable to work there the only one directly available for Ideen II is the reconstructed one.

History as a Science and the System of the Sciences Thomas M. Seebohm, 2015-04-09 This volume goes beyond presently available phenomenological analyses based on the structures and constitution of the lifeworld. It shows how the science of history is the mediator between the human and the natural sciences. It demonstrates that the distinction between interpretation and explanation does not imply a strict separation of the natural and the human sciences. Finally it shows that the natural sciences and technology are inseparable but that technology is one-sidedly founded in pre-scientific encounters with reality in the lifeworld. In positivism the natural sciences are sciences because they offer causal explanations testable in experiments and the humanities are human sciences only if they use methods of the natural sciences. For epistemologists following Dilthey the human sciences presuppose interpretation and the human and natural sciences must be separated. There is phenomenology interested in psychology and the social sciences that distinguish the natural and the human sciences but little can be found about the historical human sciences. This volume fills the gap by presenting analyses of the material foundations of the understanding of expressions of other persons and of primordial recollections and expectations founding explicit expectations and predictions in the lifeworld. Next it shows on the basis of history as applying philological methods in interpretations of sources the role of a universal spatio-temporal framework for reconstructions and causal explanations of what has really happened.

Ideas for a Hermeneutic Phenomenology of the Natural Sciences J. J. Kockelmans, 1993-07-31

The Husserlian Foundations of Science Elisabeth Ströker, 2013-11-09 This book starts with a representation of Husserl's idea of phenomenology as a foundational theory of science. The following essays elucidate the main features of the phenomenological method as worked out by Husserl in the course of the development of his philosophy starting from merely descriptive and going on to transcendental and constitutive phenomenology in order to get access to the foundations of knowledge in general and of scientific knowledge in particular. Further essays deal with the Husserlian foundations of natural science and the relations between phenomenology and psychology as well as those between phenomenology and history. This second revised and enlarged edition the first appeared in 1987 and was edited by Lee Hardy contains two further essays one deals with Husserl's never abandoned idea of phenomenology as a rigorous science and his further claim to restore phenomenological philosophy as First Philosophy and the other one on the problem of crisis of the Western culture. Husserl was concerned with during several periods of his life demonstrates the actuality of his phenomenology even for philosophy of science in our times.

Husserl's Phenomenology and the Foundations of Natural Science Charles W. Harvey, 1989 Harvey philosophy U of Central Arkansas argues that the phenomenology of German

philosopher Edmund Husserl is a response to the dualisms that emerged from 17th c philosophy He sheds light on the relation classical phenomenology has to broad concerns in the history of philosophy Annotation copyrighted by Book News Inc Portland OR

Hermeneutics and the Natural Sciences Robert P. Crease, 2012-12-06 This remarkable volume attests to the world wide development of a hermeneutical approach to the natural sciences Questions raised by the essays include What is a phenomenology of scientific perception How does meaning arise out of laboratory situations How do individuals or groups come to terms with the particular problem situations in which they find themselves by drawing on the available conceptual and practical resources which structure these situations The essays are organized around three central themes One group of authors Heelan Kockelmans and Gremmen Jacobs recalls and applies existing historical resources of hermeneutical phenomenology to current scientific and social issues A second group Kisiel Eger considers the differences between a specifically hermeneutical approach to science and related approaches such as cultural studies and social constructivism A third group Ihde Gendlin seeks to forge new directions and tools for understanding natural scientific practice As Crease s introductory essay makes plain the authors share the commitment of hermeneutical philosophy to the priority of meaning over technique the primacy of the practical over the theoretical and the priority of situation over abstract formulation In the process the authors revive and transform the ancient Greek idea that the key to living well to being fully and authentically human resides primarily in the exercise of the practical not the theoretical virtues in the art of doing well in the workworld and acting well in the polis

Nature's Suit Lee Hardy, 2014-01-15 Edmund Husserl founder of the phenomenological movement is usually read as an idealist in his metaphysics and an instrumentalist in his philosophy of science In *Nature's Suit* Lee Hardy argues that both views represent a serious misreading of Husserl s texts Drawing upon the full range of Husserl s major published works together with material from Husserl s unpublished manuscripts Hardy develops a consistent interpretation of Husserl s conception of logic as a theory of science his phenomenological account of truth and rationality his ontology of the physical thing and mathematical objectivity his account of the process of idealization in the physical sciences and his approach to the phenomenological clarification and critique of scientific knowledge Offering a jargon free explanation of the basic principles of Husserl s phenomenology *Nature's Suit* provides an excellent introduction to the philosophy of Edmund Husserl as well as a focused examination of his potential contributions to the philosophy of science While the majority of research on Husserl s philosophy of the sciences focuses on the critique of science in his late work *The Crisis of European Sciences* Lee Hardy covers the entire breadth of Husserl s reflections on science in a systematic fashion contextualizing Husserl s phenomenological critique to demonstrate that it is entirely compatible with the theoretical dimensions of contemporary science

Thomas Seebohm on the Foundations of the Sciences Thomas Nenon, 2020-02-03 This book explores the work of Thomas Seebohm 1934 2014 a leading phenomenologist and hermeneuticist It features papers that offer a critical and constructive dialogue about Seebohm s analyses and their

implications for the sciences The net result is an in depth study and a helpful overview of Seebohm s general approach and his specific views on various areas of modern science The contributors focus especially upon his final text History as a Science and the System of the Sciences They view this as the culmination and summary of his historical and phenomenological investigations into the foundations nature and limits of modern sciences This includes not just history but the Geisteswissenschaften more generally along with the social and natural sciences as well The essays in this volume reflect that range This volume presents insightful discussions about the nature and legitimacy of the human sciences as sciences and the unique character of the social sciences It will be of interest not just as a matter of historical scholarship but also and above all as an important contribution to phenomenology and to the philosophy of science and the sciences as such It deserves attention by scholars from any philosophical tradition interested in thinking about the foundations of their disciplines and a philosophy of science that includes but is not limited to the natural sciences *Hermeneutics and Science*
