

# PENETRATION ENHANCEMENT

- Skin penetration enhancement techniques have been developed to improve bioavailability & increase the range of drugs for which topical & transdermal delivery.
- Penetration enhancers penetrate through skin to decrease the barrier resistance.
- Alternatively, physical mechanisms such as iontophoresis & phonophoresis can be used for certain cases of drugs.

**Chemical Aspects of Drug Delivery Systems** D R Karsa, R A Stephenson, 2007-10-31 Despite advances in the development of new drugs a drug may never reach the target organ or it may be difficult to achieve the necessary level of drug in the body Large doses can result in serious side effects and can harm normal as well as diseased cells and organs and for this reason it is vital that controlled release and the targeting of delivery systems must evolve in parallel to drug research Chemical Aspects of Drug Delivery Systems reflects the modern challenge to devise effective drug delivery and targeting systems giving particular emphasis to recent innovations in the field Delivery systems described include carbohydrate derivatives novel nonionic surfactant vesicles and various polymers including polyacrylates and aqueous shellac solutions as well as hydrogels In addition many of the key issues such as the understanding of biosystems and targets and the development of materials to provide the deserved carrier and excipient properties for controlled targeted drug delivery are considered in depth This book will be of equal interest to undergraduate graduate researcher and those in the pharmaceutical industries and it complements two previous RSC Special Publications Encapsulation and Controlled Release and Excipients and Delivery Systems for Pharmaceutical Formulations

**Penetration Enhancement Techniques Overcoming Skin Barrier** Sharma Manu, 2014 Transdermal drug delivery system offers an alternative pathway for systemic drug delivery with several advantages over conventional routes Unfortunately the barrier nature of the skin presents a significant obstacle for most drugs to be delivered Consequently several approaches including both the chemical and physical enhancement strategies are used to increase skin permeability Potential substances used for this purpose need to have both features i e drug penetration promoting effects and a low or no skin irritating potential However none of the chemical penetration enhancer exhibits both of these properties Physical methods involving ultrasound electric fields magnetic field pressure waves radiofrequency abrasion have more extensively increased transdermal delivery for small drugs macromolecules and vaccines The ability of these technologies to deliver drugs effectively is partially counterbalanced by their reliance on electronically controlled devices which constrains applications and cost This book therefore provide an insight of the penetration enhancement techniques useful for delivery of drug across skin overcoming its barrier function

**Skin Barrier** Hans Schaefer, Thomas E. Redelmeier, 1996 Skin Barrier is the first book to be written exclusively by researchers for researchers as a convenient desktop reference It focuses on several key aspects of the skin barrier including composition and structure and a description of the properties governing the diffusion of compounds across the skin Although there has been a large number of laboratories involved in measuring percutaneous absorption over the past 15 to 20 years it is only recently that there has been a general consensus in the scientific community regarding the development of standard protocols Recognizing the

importance of this the authors have included two chapters detailing the protocol used in measuring and predicting percutaneous absorption and a discussion on the practical application of these techniques to solve associated problems In order to provide the researcher and especially the student with access to more detailed information the book features a comprehensive listing of references published over the past 10 years Skin Barrier is the only desktop reference for dermatologists cosmetologists biochemists biologists and those in the pharmaceuticals industry who need detailed and accurate information about the skin barrier on a daily basis No R D department should be without a copy
