Headlines That Matter Kavita Chandran, Saldene Lyte, 2025 Not every news announcement grabs a financial trader's attention prompting them to initiate a buy or sell call. Glued to their screens every day, traders are alerted to important information by journalists who work with news agencies such as Reuters, Bloomberg, Associated Press, and Dow Jones, to name a few. American wires or regional wire services such as Agence France Presse, AFP, Press Trust of India, PTI, or Algemeen Nederlands Persbureau, ANP. The urgent news flashes come from journalists who have impeccable news judgement along with the ability to think and write at great speed. What is it that these journalists look for in company press releases, remarks by political leaders, or comments by central bankers? How do they evaluate corporate scandals and communications on sensitive social and political issues? What about food recalls, labor disputes, and supply chain problems? Why do markets react to such headlines and news updates? Using many recent examples of headlines that influenced the markets, two former Bloomberg headline writers reveal the workings and thought processes of an adrenaline-packed team which caters to those who deal with money matters within seconds, day in and day out. The insights in this book benefit students of both business journalism and finance as well as CEOs, corporate communications directors, and wealth managers, investors, and traders.

The Voice Catchers Joseph Turow, 2021-05-18 Your voice as biometric data and how marketers are using it to manipulate you. Only three decades ago it was inconceivable that virtually entire populations would be carrying around wireless phones wherever they went, or that people's exact locations could be tracked by those devices. We now take both for granted. Even just a decade ago, the idea that individuals' voices could be used to identify and draw inferences about them as they shopped or interacted with retailers seemed like something out of a science fiction novel. Yet a new business sector is emerging to do exactly that. The first in-depth examination of the voice intelligence industry, *The Voice Catchers* exposes how artificial intelligence is enabling personalized marketing and discrimination through voice analysis. Amazon and Google have numerous patents pertaining to voice profiling, and even now their smart speakers are extracting and using voice prints for identification and more. Customer service centers are already approaching every caller based on what they conclude a caller's voice reveals about that person's emotions, sentiments, and personality, often in real time. In fact, many scientists believe that a person's weight, height, age, and race, not to mention any illnesses they may have, can also be identified from the sound of that individual's voice. Ultimately, not only marketers but also politicians and governments may use voice profiling to infer personal characteristics for selfish interests and not for the benefit of a citizen or of society as a whole. Leading communications scholar Joseph Turow places the voice intelligence industry in historical perspective, explores its contemporary developments, and offers a clarion call for regulating
