Kennish, 2019-11-11 Ecology of Estuaries represents the most definitive and comprehensive source of reference information available on the human impact on estuarine ecosystems The volume discusses both acute and insidious pollution problems plaguing these coastal ecotones It also provides a detailed examination of the deleterious and pervasive effects of human activities on biotic communities and sensitive habitat areas in estuaries Specific areas covered include organic loading oil pollution polynuclear aromatic hydrocarbons chlorinated hydrocarbons heavy metals dredging and dredged spoil disposal radionuclides as well as other contaminants and processes The diverse components of these anthropogenic influences are assembled in an organized framework and presented in a clear and concise style that facilitates their understanding

Venugopalan, 2012-01-07 The use of water for industrial purposes is of foremost importance It is used as a coolant and industrial activities dealing with power generation steel and iron paper and pulp and oil require very large amounts of water The industry therefore resorts to large scale abstraction of water from natural water bodies This water is often treated with chemicals to combat operational problems like biofouling and corrosion Such withdrawal and subsequent discharge of large amounts of water have the potential to impart significant impact on the recipient water body The organisms drawn along with the cooling water as well as those residing at the discharge zone are subjected to a combination of mechanical thermal and chemical stress on a continuous basis Journal , 1981 **An Investigation of Methods to Measure and Predict Biological and Physical Effects of Commercial Navigation Traffic** Andrew C.
