Practical Astrophotography

William Chauvenet

Practical Astrophotography:

Practical Astrophotography Jeffrey R. Charles, 2012-12-06 Almost all amateur astronomers want to take photographs of the night sky. For all but the simplest star trail pictures this involves machinery: a telescope drive to track the stars essential to compensate for the rotation of the earth. The task becomes even more complicated when photographing very small or very faint objects that require high magnification or very long exposure times. Amateurs have many options according to their requirements: technical ability and budget. Astrophotography for Amateurs looks at all the possibilities including normal wet photography, CCD imaging and modern techniques of computer enhancement. There are sections about photographing different classes of astronomical object from the Moon to faint nebulae as well as a thorough look at the equipment needed.
