Generative Programming and Component Engineering Frank Pfenning, Yannis Smaragdakis, 2003-11-19 This volume constitutes the proceedings of the second International Conference on Generative Programming and Component Engineering GPCE 2003 held September 22-25 2003 in Erfurt Germany sponsored by the NetObjectDays German industrial software development event in cooperation with the ACM SIGPLAN and SIGSOFT societies GPCE was created as an effort to bring together researchers working on both the programming languages and the software engineering side of program generation and component engineering The common theme of program generation and component engineering is the domain specific nature of both approaches Depending on the characteristics of a domain either a generative or a compositional technical solution may be appropriate In just its second year GPCE has shown a lot of promise for building a strong community The response to the call for papers was excellent with 62 submissions to the technical program 2 of which were later withdrawn Each paper received between three and five reviews many of them quite thorough and hopefully valuable to all authors The electronic meeting allowed for depth discussion of all submissions often to a much greater extent than possible in a physical PC meeting As a result 21 papers were selected for presentation at the conference and are included in this volume together with abstracts for the invited talks by Olivier Danvy and Peri Tarr Of the accepted papers 3 are co-authored by PC members from a total of 5 PC submissions We tried hard to ensure fairness and hold PC submissions to a high standard The EDAS conference submission system was used to manage the paper submissions Our EDAS installation was supported by Blair MacIntyre who was particularly helpful in resolving technical issues with the system

Nakajima, 2014-01-15 Parallel Computing in Science and Engineering Rüdiger Dierstein, Dieter Müller-Wichards, Hans-Martin Wacker, 1988-05-11 It was the aim of the conference to present issues in parallel computing to a community of potential engineering scientific users An overview of the state of the art in several important research areas is given by leading scientists in their field The classification question is taken up at

various points ranging from parametric characterizations communication structure and memory distribution to control and execution schemes Central issues in multiprocessing hardware and operation such as scalability techniques of overcoming memory latency and synchronization overhead as well as fault tolerance of communication networks are discussed The problem of designing and debugging parallel programs in a user friendly environment is addressed and a number of program transformations for enhancing vectorization and parallelization in a variety of program situations are described Two different algorithmic techniques for the solution of certain classes of partial differential equations are discussed The properties of domain decomposition algorithms and their mapping onto a CRAY XMP type architecture are investigated and an overview is given of the merit of various approaches to exploiting the acceleration potential of multigrid methods Finally an abstract performance modeling technique for the behavior of applications on parallel and vector architectures is described
