Betting Odds Best Setup:

How to Build a Time Machine Paul Davies, 2002-06-06 Inspired at an impressionable age by the work of science fiction writers H G Wells and Arthur C Clarke Paul Davies has thought long and hard about ways to travel in time Here the best selling popular science writer finally reveals how it can be done without breaking the laws of physics and without causing any earth shattering paradoxes Since time is money time travel is a costly business But with the help of a handy black hole or better a wormhole and a bit of luck Davies s guide illustrates how this new mode of travel could yet be a viable option An entertaining tour around a fascinating topic conducted by a world class physicist SUNDAY TELEGRAPH

Chance in the World Carl Hoefer, 2019-08-13 Probability has fascinated philosophers scientists and mathematicians for hundreds of years Although the mathematics of probability is for most applications clear and uncontroversial the interpretation of probability statements continues to be fraught with controversy and confusion What does it mean to say that the probability of some event X occurring is 31% In the 20th century a consensus emerged that there are at least two legitimate kinds of probability and correspondingly at least two kinds of possible answers to this question of meaning Subjective probability also called credence or degree of belief is a numerical measure of the confidence of some person or some ideal rational agent Objective probability or chance is a fact about how things are in the world It is this second type of probability with which Carl Hoefer is concerned in this volume specifically how we can understand the meaning of statements about objective probability He aims to settle the question of what objective chances are once and for all with an account that can meet the demands of philosophers and scientists alike For Hoefer chances are constituted by patterns that can be discerned in the events that happen in our world These patterns are ideally appropriate guides to what credences limited rational agents such as ourselves should have in situations of imperfect knowledge By showing this Hoefer bridges the gap between subjective probability and chance In a field where few scholars have given adequate treatment to interpreting statements of chance Hoefer develops a philosophically rich theory which draws on the disciplines of metaphysics ontology and philosophy of science
