Visions of Invasion Michael Lechuga, 2023-03-02 *Visions of Invasion* Alien Affects Cinema and

Citizenship in Settler Colonies explores how the US government mobilizes media and surveillance technologies to operate a highly networked multidimensional system for controlling migrants. Author Michael Lechuga focuses on three arenas where a citizenship control assemblage manufactures alienhood: Hollywood extraterrestrial invasion film, federal antimigration and border security legislation, and various immigration enforcement protocols implemented along the Mexico-United States border. Building on rhetorical studies, settler colonial studies, and media studies, *Visions of Invasion* offers a glimpse at how the processes of alien making contribute to an ongoing settler colonial project in the US. Lechuga demonstrates that popular films like *The War of the Worlds*, *Predator*, *Men in Black*, and more participate in the production of migrants as subjective terrorists, felons, and other noncitizen personae vilified in public discourse. Beyond just tracing how alien invasion narratives circulate in popular media, Lechuga describes how the logics motivating early US colonists materialize in both the US citizenship control policy and in some of the country's most popular texts. Beneath each of the film franchises and antimigrant political expressions described in *Visions of Invasion* lies an anxious colonial logic in which the settler way of life is seemingly threatened by false narratives of imminent invasion from abroad. The volume offers a deep dive into how the rhetorical figure of the alien has been manufactured as a political subjectivity one that plays out the anxieties, guilts, and fears of colonialism in today's science-fiction landscape.

The State of Science Marc Zimmer, 2020-07-20. New research and innovations in the field of science are leading to life-changing and world-altering discoveries like never before. What does the horizon of science look like? Who are the scientists that are making it happen? And how are we to introduce these revolutions to a society in which a segment of the population has become more and more skeptical of science? Climate change is the biggest challenge facing our nation, and scientists are working on renewable energy sources, meat alternatives, and carbon dioxide sequestration. At the same time, climate change deniers and the politicization of funding threaten their work. CRISPR (Clustered Regularly Interspaced Short Palindromic Repeats) repurposes bacterial defense systems to edit genes, which can change the way we live, but also presents real ethical problems. Optogenetics will help neuroscientists map complicated neural circuitry deep inside the brain, shedding light on treating Alzheimer's and Parkinson's disease. Zimmer also investigates phony science, ranging from questionable health products to the fervent anti-vaccination movement. Zimmer introduces readers to the real people making these breakthroughs. Concluding with chapters on the rise of women in STEM fields, the importance of US immigration policies to science, and new unorthodox ways of DIY science and crowdsource funding, *The State of Science* shows where science is, where it is heading, and the scientists who are at the forefront of progress.

Telomere Miracle Ed Park, MD, 2018-01-23. What if everything you think you know about getting older and staying healthy is wrong? Ed Park, MD, offers the revolutionary idea that disease and aging in humans all arise from a single source: genetic errors caused by shortening of telomeres, or the sequences of DNA at the ends of our chromosomes. Telomeres naturally wear down over time, and thus when cells replicate as they do all the time in our bodies, they're creating progressively poorer quality duplicates of

themselves like making a Xerox of a Xerox of a Xerox Ultimately the body deteriorates resulting in a range of ailments many of which we associate with aging from diabetes to hypertension to macular degeneration to cancer Happily Ed tells us it is possible to slow or even reverse this process and effectively turn back the clock In *The Telomere Miracle* he explains cutting edge science in a lively style using illustrations and metaphors ranging from auto parts to superheroes Then he shows readers how they can intervene in the aging process by boosting the activity of the enzyme telomerase naturally by understanding and optimizing six key areas of breathing mindset sleep exercise diet and supplements
