Carbon-Free Shipping and Shipping Carbon Stephen Girvin,Vibe Ulfbeck,2024-08-22 This book explores the private law implementation of the new international and EU regulatory framework targeting decarbonisation in the shipping industry Compared with other sectors the shipping industry has traditionally been labelled a slow mover concerning the sustainability agenda However new regulatory measures on carbon reduction both internationally and in the EU require fundamentally new developments in the industry This book focuses on the goal of carbon reduction from a private law perspective and considers how the new regulatory framework can be implemented in the shipping industry This book studies existing contractual provisions in charterparties and bills of lading alongside new contractual model clauses designed to facilitate carbon reduction It considers how the new clauses should be interpreted whether they will transform traditional shipping contracts into more collaborative contracts and how they will interact with other clauses in the contract and with other contracts in the supply chain The contractual analysis is considered in context reflecting on enforcement issues such as Port State Control PSC the Poseidon Principles and climate change litigation The book also analyses the related topic of shipping contracts for carbon storage as a necessary means of meeting carbon reduction targets The book is intended to pave the way for understanding how core shipping contracts can work in this new context and the extent to which the new types of clauses will profoundly transform contracts It presents contributions by experienced and younger academics and practitioners from Asian European and Scandinavian legal systems

Cyber-worthiness in Shipping Furkan Dogan,2026-02-11 As the maritime industry undergoes a technological transformation traditional legal doctrines must evolve to address new challenges This book explores the legal and operational implications of Maritime Autonomous Surface Ships MASS and the increasing reliance on digital systems in modern shipping While automation and digitalisation enhance efficiency and safety they also introduce unprecedented cyber risks that threaten global supply chains financial stability and regulatory compliance Redefining the concept of seaworthiness by incorporating cyber worthiness and communication worthiness this book ensures that vessels are not only physically fit for sea travel but also resilient against cyber threats and equipped with secure communication systems By analysing international regulations such as UNCLOS SOLAS STCW and marine insurance frameworks the book identifies critical legal gaps and proposes necessary updates to align with the digital age Through a legal and interdisciplinary approach the book offers practical recommendations for policymakers insurers and maritime operators It outlines robust cybersecurity measures updates to insurance policies and regulatory frameworks that safeguard against evolving cyber threats Providing maritime lawyers insurers shipowners and policymakers with clear guidance on how to navigate legal uncertainties surrounding autonomous vessels cybersecurity risks and liability issues the book offers practical solutions for insurance policies charterparties and contractual clauses ensuring that risks associated with cyber threats remote operation and digital failures are adequately addressed For practitioners this book solves pressing legal and

operational problems It clarifies how existing maritime regulations such as UNCLOS SOLAS and the ISM Code apply to autonomous and digitalised ships identifies gaps in current legal frameworks and proposes necessary updates to ensure compliance
