Huw Davies, 2012-09-04 Covering all aspects of vaccine research and development in one volume this authoritative resource takes a comprehensive and systematic approach to the science of vaccinology focusing not only on basic science but also on the many stages required to commercialize and navigate the regulatory requirements for human application both in the United States and Europe Reviews in detail the process of designing a vaccine from the initial stages of antigen discovery to human application Includes evaluation of vaccine efficacy and safety Details clinical trial design including regulatory requirements Discusses the emerging field of active cellular immunotherapy Vaccinology Principles and Practice provides an invaluable resource for clinicians scientific and medical researchers lecturers and postdoctoral fellows working in the field of vaccines *Zoonotic Negative-Sense RNA Viruses* Jasmina M. Luczo, Sarah J. Edwards, 2024-03-08 Zoonotic viruses continue to pose a serious risk to human and animal health Of these negative sense RNA viruses are recognized as a major threat being the causative agent of numerous zoonotic epidemics and pandemics Moreover the World Health Organization lists numerous negative sense RNA viruses as priority pathogens of concern due to their pandemic potential and or lack of adequate countermeasures Negative sense RNA viruses such as highly pathogenic avian influenza virus Hendra and Nipah viruses Ebola virus and Crimean Congo hemorrhagic fever virus can cause severe disease and devastating infection outcomes in human and animal hosts Peering through a one health lens it is crucial to understand infection dynamics in relevant hosts to understand factors that contribute to the emergence spill over and disease severity of novel negative sense zoonotic RNA viruses HIV-Induced Damage of B Cells and Production of HIV Neutralizing Antibodies Francesca Chiodi, Gabriella Scarlatti, 2018-03-27 Multiple dysfunctions take place in the B cell compartment during HIV 1 infection comprising depletion of resting memory B cells carrying serological memory to vaccines and previously met pathogens In addition population of B cells characterized by the expression of exhaustion markers are enlarged during HIV 1 infection Antibodies with the capacity to neutralize a broad range of HIV 1 isolates can be detected only in a minority of infected patients after a year or more from acute infection An open question is whether the inability of producing neutralizing HIV 1 antibodies is somehow linked to the B cell

immunopathology observed in patients In this research topic we invited scientists to summarize the current state of knowledge on regulation and development of B cells and antibody responses during HIV 1 infection fifteen contributions were received comprising both reviews and original articles The articles are related to B cell dysfunctions identified in HIV 1 infected individuals production of different types of antibodies neutralizing versus non neutralizing and of different isotypes in vivo during HIV 1 infection and the biological factors which may impact on this process clinical potential and applications of anti HIV antibodies and how to achieve neutralizing antibody responses to HIV 1 epitopes upon vaccination The topic has gathered articles on front line research undertaken in the field of B cells and antibodies in HIV 1 infection It is our hope that the collection of articles presented in this book may be useful for new and experienced scholars in the field and add a piece to the complex puzzle of knowledge needed for the development of an HIV 1 vaccine
