immunopathology observed in patients In this research topic we invited scientists to summarize the current state of knowledge on regulation and development of B cells and antibody responses during HIV 1 infection fifteen contributions were received comprising both reviews and original articles The articles are related to B cell dysfunctions identified in HIV 1 infected individuals production of different types of antibodies neutralizing versus non neutralizing and of different isotypes in vivo during HIV 1 infection and the biological factors which may impact on this process clinical potential and applications of anti HIV antibodies and how to achieve neutralizing antibody responses to HIV 1 epitopes upon vaccination The topic has gathered articles on front line research undertaken in the field of B cells and antibodies in HIV 1 infection It is our hope that the collection of articles presented in this book may be useful for new and experienced scholars in the field and add a piece to the complex puzzle of knowledge needed for the development of an HIV 1 vaccine

Current Therapy in Avian Medicine and Surgery Volume II E-Book Brian Speer, Yvonne R.A. van Zeeland, 2025-03-04 Stay up to date with the latest advances in avian medicine

Current Therapy in Avian Medicine and Surgery Volume II brings a wealth of new information on the medical care of avian

species with practical approaches to diagnosis and therapy of psittacines and other birds. With many of the topics not previously covered in the first volume, the two books are complementary to one another and provide any veterinarian with an interest in avian medicine, whether novice or expert, the latest advances in internal medicine, anesthesia, analgesia, and surgery. Sections dedicated to behavior and welfare, neonatology and pediatrics, conservation and practice management explore important but less commonly discussed aspects of avian practice. With contributions from globally recognized experts on avian medicine, this is a must-have resource for anyone seeking to enhance and expand their expertise and skills in avian healthcare, welfare, and conservation. With the exception of updates on relevant current topics, the information presented in this volume predominantly includes material not previously covered in the first volume. The many photographs, illustrations, and comprehensive tables included in this volume visually highlight key concepts of current avian practice standards. Sections on pediatrics, falconry, toucans, and hornbills feature specific topics which are less comprehensively included in most references. Focused sections on the respiratory system, the beak and skull, feathers, and feet offer detailed information on these particular anatomical regions. Pharmacologic intervention and options are explored in depth to allow for clinicians to gain an optimal understanding of how to best develop treatment plans for their patients. NEW: An eBook version is included with print purchase. The eBook allows you to access all of the text, figures, and references with the ability to search, customize your content, make notes and highlights, and have content read aloud. Current Therapy format provides up-to-date information about patient management of specific disorders, including innovations in therapy and the pros and cons of proposed treatments. Coverage of a wide variety of bird species includes psittacines, pigeons, raptors, ratites, waterfowl, gallinaceous birds, and less common species. More than 800 full-color images depict avian disease conditions, show management strategies, and thought processes, and aid in formulating guidelines to care. Summary tables simplify the lookup of key facts and treatment guidelines. Appendices provide quick access to a current drug formulary, normal biological data, clinical pathologic reference ranges, and growth and feeding charts of neonatal birds.
