New Challenges for Cancer Systems Biomedicine Alberto D'Onofrio, Paola Cerrai, Alberto Gandolfi, 2013-01-25 The future of oncology seems to lie in Molecular Medicine MM MM is a new science based on three pillars Two of them are evident in its very name and are well known medical science and molecular biology However there is a general unawareness that MM is firmly based on a third and equally important pillar Systems Biomedicine Currently this term denotes multilevel hierarchical models integrating key factors at the molecular cellular tissue through phenotype levels analyzed to reveal the global behavior of the biological process under consideration It becomes increasingly evident that the tools to construct such complex models include not only bioinformatics and modern applied statistics as is unanimously agreed but also other interdisciplinary fields of science notably Mathematical Oncology Systems Biology and Theoretical Biophysics **Current**

**Progress and Challenges in the Development of a Hepatitis C Virus Vaccine** Steven K.H. Fong, Thomas F. Baumert, 2019-01-22 More than 70 million people worldwide are infected with hepatitis C virus a major cause of liver cirrhosis liver failure and hepatocellular carcinoma world wide In the last decade this cancer has emerged as the second leading cause of cancer death and the global burden is increasing by two million new infections per year mainly due to injection drug use An effective vaccine will be the most effective means to contain the spread of this virus worldwide The articles in this Research Topic describe the progress that has been made towards a preventive vaccine and the challenges that still need to be overcome to ultimately achieve this goal **New-generation vaccines and novel vaccinal strategies against infectious diseases of livestock, wild and companion animals** Denis Archambault, Raul Manzano Roman, Suresh Kumar Tikoo, Christophe Chevalier, Brad Pickering, 2023-08-25 Emerging and re emerging infections in particular those caused by viruses are expected to rise in correlation among other factors with climate changes Antibiotic resistance is another issue that will limit the therapeutic arsenal against bacterial and parasitic infections Therefore one must be adequately prepared to overcome and prevent current and novel infections and vaccination remains the optimal way to fight infectious diseases in humans This is also true for many impacting diseases of livestock and companion animals to which there are no available vaccines First attenuated and inactivated and second subunit generation vaccines have their limitations To overcome this efforts have been made in recent years to develop novel vaccine types such as virus like particle VLP viral vector and DNA based vaccines in humans and animals The recent success in utilizing RNA technology based vaccines to fight SARS CoV 2 to limit the severity of clinical symptoms and mortality constitutes a promising way to develop such vaccines against animal diseases Development of novel molecules or materials with adjuvant or immunostimulatory activity to adequately stimulate the innate immune response and therefore the pathogen specific adaptive immune response as well as the identification of suitable antigenic material that would bring broad protection against infectious agent variants are other key issues to be considered in developing safe and innovative immunization strategies **Animal**
