Planetary Encounters:

New Developments in the Dynamics of Planetary Systems Rudolf Dvorak, Jacques Henrard, 2013-06-29 It is now a well established tradition that every four years at the end of winter a group of celestial mechanicians from all over the world gather in the Austrian Alps at the invitation of R Dvorak This time the colloquium was held at Badhofgastein from March 19 to March 25 2000 and was devoted to the New Developments in the Dynamics of Planetary Systems The papers covered a large range of questions of current interest theoretical questions resonances KAM theory transport and questions about numerical tools synthetic elements indicators of chaos were particularly well represented of course planetary theories and Near Earth Objects were also quite popular Three special lectures were delivered in honor of deceased colleagues whom to our dismay we will no longer meet at the Austrian Colloquia W Jefferys delivered the Heinrich Eichhorn lecture on Statistics for the Twenty first Century Astrometry a topic on which Heinrich Eichhorn was a specialist A Roy delivered a lecture honoring Victor Szehebely on Lifting the Darkness Science in the Third Millenium in which in wove anecdotes and remembrances of Victor which moved the audience very much A Lemaitre spoke in honor of Michele Moons on Mechanism of Capture in External Resonance The end of her talk was devoted to a short and moving biography of Michele illustrated by many slides

Shapes and Dynamics of Granular Minor Planets Ishan Sharma, 2016-11-01 This book develops a general approach that can be systematically refined to investigate the statics and dynamics of deformable solid bodies These methods are then employed to small bodies in the Solar System With several space missions underway and more being planned interest in our immediate neighbourhood is growing In this spirit this book investigates various phenomena encountered in planetary science including disruptions during planetary fly bys equilibrium shapes and stability of small rubble bodies and spin driven shape changes The flexible procedure proposed here will help readers gain valuable insights into the mechanics of solar system bodies while at the same time complementing numerical investigations The technique itself is built upon the virial method successfully employed by Chandrasekhar 1969 to study the equilibrium shapes of spinning fluid objects However here Chandrasekhar's approach is modified in order to study more complex dynamical situations and include objects of different rheologies e g granular aggregates or rubble piles The book is largely self contained though some basic familiarity with continuum mechanics will be
