OECD, 2016-04-05 This series represents a compilation of the biosafety consensus documents developed by the OECD Working Group on Harmonisation of Regulatory Oversight in Biotechnology over the periods 2011-12 Volume 5 and 2013-15 Volume 6.

Hydroponics Toshiki Asao, 2012-03-23 Hydroponics: A standard methodology for plant biological researches provides useful information on the requirements and techniques needed to be considered in order to grow crops successfully in hydroponics. The main focuses of this book are preparation of hydroponic nutrient solution, use of this technique for studying biological aspects and environmental controls, and production of vegetables and ornamentals hydroponically. The first chapter of this book takes a general description of nutrient solution used for hydroponics, followed by an outline of an in vitro hydroponic culture system for vegetables. Detailed descriptions on use of hydroponics in the context of scientific research into plants' responses and tolerance to abiotic stresses and on the problems associated with the reuse of culture solution and means to overcome it are included. Some chapters provide information on the role of hydroponic technique in studying plant-microbe environment interaction and in various aspects of plant biological research and also understanding of root uptake of nutrients and thereof role of hydroponics in environmental clean up of toxic and polluting agents. The last two chapters outlined the hydroponic production of cactus and fruit tree seedlings. Leading research works from around the world are brought together in this book to produce a valuable source of reference for teachers, researcher and advanced students of biological science and crop production.

Genetic Transformation María Alvarez, 2011-09-06 Genetic transformation of plants has revolutionized both basic and applied plant research. Plant molecular biology and physiology benefit from this powerful tool as well as biotechnology. This book is a review of some of the most significant achievements that plant transformation has brought to the fields of *Agrobacterium* biology, crop improvement and flower, fruit and tree amelioration. Abiotic Stress Response in Plants Arun Shanker, B. Venkateswarlu, 2011-08-29 Plants

unlike animals are sessile This demands that adverse changes in their environment are quickly recognized distinguished and responded to with suitable reactions Drought heat cold and salinity are among the major abiotic stresses that adversely affect plant growth and productivity In general abiotic stress often causes a series of morphological physiological biochemical and molecular changes that unfavorably affect plant growth development and productivity Drought salinity extreme temperatures cold and heat and oxidative stress are often interrelated these conditions singularly or in combination induce cellular damage To cope with abiotic stresses of paramount significance is to understand plant responses to abiotic stresses that disturb the homeostatic equilibrium at cellular and molecular level in order to identify a common mechanism for multiple stress tolerance This multi authored edited compilation attempts to put forth an all inclusive biochemical and molecular picture in a systems approach wherein mechanism and adaptation aspects of abiotic stress are dealt with The chief objective of the book hence is to deliver state of the art information for comprehending the effects of abiotic stress in plants at the cellular level

Phytonutritional Improvement of Crops Nouredine Benkeblia, 2017-11-13 An in depth treatment of cutting edge work being done internationally to develop new techniques in crop nutritional quality improvement Phytonutritional Improvement of Crops explores recent advances in biotechnological methods for the nutritional enrichment of food crops Featuring contributions from an international group of experts in the field it provides cutting edge information on techniques of immense importance to academic professional and commercial operations World population is now estimated to be 7.5 billion people with an annual growth rate of nearly 1.5% Clearly the need to enhance not only the quantity of food produced but its quality has never been greater especially among less developed nations Genetic manipulation offers the best prospect for achieving that goal As many fruit crops provide proven health benefits research efforts need to be focused on improving the nutritional qualities of fruits and vegetables through increased synthesis of lycopene and beta carotene anthocyanins and some phenolics known to be strong antioxidants Despite tremendous growth in the area occurring over the past several decades the work has only just begun This book represents an effort to address the urgent need to promote those efforts and to mobilise the tools of biotechnical and genetic engineering of the major food crops Topics covered include New applications of RNA interference and virus induced gene silencing VIGS for nutritional genomics in crop plants Biotechnological techniques for enhancing carotenoid in crops and their implications for both human health and sustainable development Progress being made in the enrichment and metabolic profiling of diverse carotenoids in a range of fruit crops including tomatoes sweet potatoes and tropical fruits Biotechnologies for boosting the phytonutritional values of key crops including grapes and sweet potatoes Recent progress in the development of transgenic rice engineered to massively accumulate flavonoids in seed Phytonutritional Improvement of Crops is an important text reference that belongs in all universities and research establishments where agriculture horticulture biological sciences and food science and technology are studied taught and applied
