Plant Genetic Engineering Volume 8 Metabolic Engineering And Molecular Farmingii:

Sustainable Agriculture: Biotechniques in Plant Biology Javid Ahmad Parray, Mohammad Yaseen Mir, Nowsheen Shameem, 2019-11-06 This book will be of immense help to the students of plant biotechnology Agricultural sciences Microbiology of both undergraduate and postgraduate levels in universities colleges and Research institutes Besides the book will be quite supportive researchers who work in the field of plant biotechnology and agricultural sciences In this book the main focus will be on advanced genome editing approaches for the production of GM crops besides their socioeconomic ethical and risk biosafety assessments Nanotechnology is the new emerging and fascinating field of science finds its application in almost all the major research areas and its uses in agriculture and food sectors are incipient The book seems to be first in summarizing the two way interactive approach in the field of plant biotechnology and setting of a new arena in shaping the new bio techniques towards the sustainable cause Plant Biotechnology and Genetics for Sustainable Agriculture and Global Food Security Galal Bakr Anis, Yinglong Chen, Baohong Zhang, 2024-09-12 According to the World Food Programme 135 million suffer from acute hunger largely due to man made conflicts climate change and economic downturns The COVID 19 pandemic could now double that number putting an additional 130 million people at risk of suffering with acute hunger Moreover food insecurity and low dietary quality cause huge public health problems Malnutrition is responsible for physical and mental development impairments various infectious diseases and unacceptably high numbers of premature deaths Since the Green Revolution a constant increase in crop productivity have experienced however there is concern that yield improvement is not enough Current rate of annual yield increases for major crops ranges between 0.8-1.2 % which needs to be doubled to feed the ever increasing human population The classical breeding techniques contributed toward the development of superior crop varieties which helped in achieving food security for ever increasing human population However with the passage of time these classical breeding approaches are lagging to meet global food requirements and scientists are working on novel plant breeding techniques NPBTs and other breakthrough agricultural techniques to reduce hunger Recently OMICs genome wide association studies GWAS QTL mapping Next Generation Sequencing NGS and genome editing GE approaches etc have proven to be powerful tools that we have at our disposal to overcome substantial obstacles in the way of efficiency and productivity of current agricultural practices In addition recently there has been a rapid development of online forums methods protocols and application strategies for genome based techniques and their applications for crop improvement Technology of Functional Cereal Products B R Hamaker, 2007-11-08 Cereal grains and their fractions contain many health protecting compounds such as phytochemicals vitamins and indigestible carbohydrates but the texture and taste of functional cereal products can be less than ideal This important collection reviews technologies for producing a wide range of cereal products with different health promoting properties and more acceptable sensory quality The first part of the book discusses the health effects of cereals with chapters

on topics such as whole grain foods cereal micronutrients and resistant starch Consumer perception of health promoting cereal products and regulatory and labelling issues are also described The second part focuses on technologies to improve the quality of functional cereal products reviewing issues such as grain improvement novel cereal derived ingredients and formulation of low GI products Chapters dedicated to a wide range of product types are also included covering cereal foods made from oats rye barley and speciality grains and breads fortified with vitamins and minerals soy and omega 3 lipids among others Technology of functional cereal products is an essential reference for all those involved in research and development of health promoting cereal based foods Reviews technologies for producing a wide range of cereal products Discusses the health effect of cereals including whole grain foods and cereal micronutrients Describes consumer perception of health promoting cereal products

Frontiers in Molecular Pharming Muhammad Sarwar Khan, 2021-12-09 The advent of large scale production and clinical trials of drugs developed through diverse production routes involving viruses microbes plants and animals has increased the demand for an expanded capacity for pharmaceutical manufacturing The production and purification of expressed proteins accounts for the bulk of the manufacturing costs for new therapeutics Several pharmaceutical proteins have been synthesized by exploiting plant genetics allowing producers to override conventional approaches used to manufacture pharmaceuticals The process of inserting a gene into a host organism for the purpose of harvesting a bioactive molecule for therapeutic use is known as molecular pharming Frontiers in Molecular Pharming covers an array of topics relevant to understanding the structure function regulation and mechanisms of action biochemical significance and usage of proteins and peptides as biomarkers therapeutics and vaccines for animals and humans The contributions aim to highlight current progress in three areas including system biology in vivo characterization of proteins and peptides molecular pharming for animals and molecular pharming for humans The book gives special attention to computational biology tools production platforms and fields such as immunoinformatics and applications of molecular pharming such as veterinary therapeutics A balance of theoretical concepts and practical applications is provided through 13 chapters Frontiers in Molecular Pharming is an invaluable resource for students and researchers of biochemistry molecular biology and biotechnology The book also serves as a springboard for understanding the process of how discoveries in protein and peptide research and its applications are coming to fruition

Advances on Genomics and Genetics of Horticultural Crops and their Contribution to Breeding Efforts, volume II Eleni Tani, Aliko Xanthopoulou, Christos Bazakos, 2024-03-06 Horticultural crops are an excellent source of vitamins antioxidants and fibers that play an important role in human health The discovery of modern genomic tools the continuous generation of genomic data and the application of comparative and functional genomics are high importance innovations with numerous applications in crop breeding The utilization of all these new techniques in combination with the analysis of genomic data using bioinformatics tools contribute to a better understanding of the function of various agronomic traits of interest as well as horticultural crops breeding Over

the last few years novel genome editing tools such as the CRISPR Cas9 have been developed and revolutionized molecular technologies due to their simplicity high efficiency and specificity

Molecular and Metabolic Mechanisms Associated with Fleshy Fruit Quality Ana M. Fortes, Antonio Granell, Mario Pezzotti, Mondher Bouzayen, 2017-09-08

Fleshy Fruits are a late acquisition of plant evolution In addition of protecting the seeds these specialized organs unique to plants were developed to promote seed dispersal via the contribution of frugivorous animals

Fruit development and ripening is a complex process and understanding the underlying genetic and molecular program is a very active field of research Part of the ripening process is directed to build up quality traits such as color texture and aroma that make the fruit attractive and palatable As fruit consumers humans have developed a time long interaction with fruits which contributed to make the fruit ripening attributes conform our needs and preferences This issue of Frontiers in Plant Science is intended to cover the most recent advances in our understanding of different aspects of fleshy fruit biology including the genetic molecular and metabolic mechanisms associated to each of the fruit quality traits It is also of prime importance to consider the effects of environmental cues cultural practices and postharvest methods and to decipher the mechanism by which they impact fruit quality traits Most of our knowledge of fleshy fruit development ripening and quality traits comes from work done in a reduced number of species that are not only of economic importance but can also benefit

from a number of genetic and genomic tools available to their specific research communities For instance working with tomato and grape offers several advantages since the genome sequences of these two fleshy fruit species have been deciphered and a wide range of biological and genetic resources have been developed Ripening mutants are available for tomato which constitutes the main model system for fruit functional genomics In addition tomato is used as a reference species for climacteric fruit which ripening is controlled by the phytohormone ethylene Likewise grape is a reference species for non climacteric fruit even though no single master switches controlling ripening initiation have been uncovered yet In the last period the genome sequence of an increased number of fruit crop species became available which creates a suitable situation for research communities around crops to get organized and information to be shared through public repositories On the other hand the availability of genome wide expression profiling technologies has enabled an easier study of global transcriptional changes in fruit species where the sequenced genome is not yet available In this issue authors will present recent progress including original data as well as authoritative reviews on our understanding of fleshy fruit biology focusing on tomato and grape as model species
