Plant Protease Inhibitors Yehudith Birk,2003-04-08 Plant protease inhibitors are diverse in number specificity towards various proteolytic enzymes Genetic Manipulation in Plants for Mitigation of Climate Change Pawan Kumar Jaiwal,Rana Pratap Singh,Om Parkash Dhankher,2016-01-07 This book presents a detailed overview and critical evaluation of the state of the art and latest approaches in genetic manipulation studies on plants to mitigate the impact of climate change on growth and productivity Each chapter has been written by experts in plant stress biology and highlights the involvement of a variety of genes pathways and their regulation in abiotic stress recent advances in molecular breeding identification of tightly linked markers QTLs genes transgenesis introduction of exogenous genes or changing the expression of endogenous stress responsive genes and genomics approaches that have made it easier to identify and isolate several key genes involved in abiotic stress such as drought water lodging flooding extreme temperatures salinity and heavy metal toxicity Food and nutritional security has emerged as a major global challenge due to expanding populations and cultivated areas becoming less productive as a result of extreme climatic changes adversely affecting the quantity and quality of plants Hence there is an urgent need to develop crop varieties resilient to abiotic stress to ensure food security and combat increased input costs low yields and the marginalization of land The role of GM crops in poverty alleviation nutrition and health in developing countries and their feasibility in times of climate change are also discussed Recent advances in gene technologies have shown the potential for faster more targeted crop improvements by transferring genes across the sexual barriers The book is a valuable resource for scientists researchers students planners and industrialists working in the area of biotechnology plant agriculture agronomy horticulture plant physiology molecular biology plant sciences and environmental sciences **Natural Products as Enzyme Inhibitors** Vijay L. Maheshwari,Ravindra H. Patil,2022-05-03 This book provides an overview of the latest developments and future challenges in enzyme inhibitor research It discusses the general enzyme inhibitory principles and mechanisms in enzyme activity regulation and application of enzyme inhibitors in different areas and sectors The major areas of applications of enzyme inhibitors covered in this book are human health management agriculture food processing and research which leads to drug discovery or enzyme activity mechanisms The book also identifies the gaps in the existing knowledge and opens up new research ideas in this important area Currently most enzyme inhibitors are reported to inhibit various classes of enzymes These enzyme inhibitors are the focus of the scientific community because they may answer an increasing array of questions in the research area of biological sciences including biochemistry medicine physiology pharmacy agriculture ecology etc It also serves as a useful tool in the study of enzyme structures and reaction mechanisms and in the development of technologies in agriculture food processing and health management Chapters in this book cover topics such as plant derived inhibitors of serine proteases pancreatic lipase PL inhibitors from indigenous medicinal plants amylase inhibitors and their applications in agriculture and food processing industries and advances in silico techniques used

in the study of enzyme inhibitors The book will serve as a valuable resource for students and researchers in Life Sciences agriculture medicine food processing and allied industries **Defense-Related Proteins in Plants** Santosh Kumar Upadhyay,2024-06-04 Defense related Proteins in Plants presents detailed information on the identification characterization mechanism of action and application in crop improvement programs of these mechanisms in a single cohesive volume It includes foundational information to enable the understanding of these proteins and their applications in crop improvement programs Defense related proteins have drawn the attention of various plant and agricultural scientists and industries because they provide generalized direct stress tolerance in crop plants These proteins including lectins chitinases thaumatin and osmotin among others have been used for the development of transgenic plants to provide protection against various abiotic and biotic stresses While there is a breadth of research and application information available it has not previously been compiled into a single volume for the ease of comparison and translational work This book is a complete guide to defense related proteins in plants for various categories of readers Also it will inspire future research into the unexplored areas of the molecular aspects of these proteins to understand their role and action mechanism in plants and living organisms as a whole Additionally agricultural scientists and industry professionals will find the application part of this book helpful in future crop design strategies Presents comprehensive information on defense related proteins in plants Highlights practical application of defense related proteins in crops Structured for ease of comparison and translational work
