Plant Protoplasts And Genetic Engineering I:

Plant Protoplasts and Genetic Engineering I Y. P. S. Bajaj, 2012-12-06 Isolated protoplasts are a unique tool for genetic manipulation of plants Since the discovery of a method for the enzymatic isolation of protoplasts by Professor E C Cocking in 1960 tremendous progress has been made in this very fascinating area of research I have witnessed the struggle in the 1960 s and early 1970 s when obtaining a clean preparation of protoplasts was considered an achievement I also shared the pioneering excitement and enthusiasm in this field during the 2nd International Congress of Plant Tissue Culture held at Strasbourg in 1970 where Dr I Thkebe of Japan presented his work on the induction of division in tobacco protoplasts This was followed by my participation in three international conferences devoted to plant protoplasts held in 1972 in Salamanca Spain and Versailles France and then in 1975 in Nottingham England The enthusiasm shown by plant scientists at these meetings was ample proof of the bright future of protoplast technology and it became evident that protoplasts would play a major role in plant biotechnology especially in genetic engineering Since then we have never looked back and now the methods for isolation fusion and culture as well as regeneration of somatic hybrids have become routine laboratory procedures for most plant species Currently the focus is on cereal and tree protoplasts In order to bring about any genetic manipulation through fusion in incorporation of DNA and transformation the regeneration of the entire plant through manipulation of protoplasts is a prerequisite *Plant Protoplasts and Genetic Engineering IV* Y. P. S. Bajaj, 2012-12-06 In continuation of Volumes 8 9 and 22 on in vitro manipulation of plant protoplasts this new volume deals with the regeneration of plants from protoplasts and genetic transformation in various species of Actinidia Amoracia Beta Brassica Cicer Citrus Cucumis Duboisia Fragaria Glycine Ipomoea Lactuca Lotus Lycopersicon Manihot Medicago Nicotiana Petunia Phaseolus Pisum Prunus Psophocarpus Saccharum Solanum Sorghum Stylosanthes and Vitis These studies reflect the far reaching implications of protoplast technology in genetic engineering of plants They are of special interest to researchers in the field of plant tissue culture molecular biology genetic engineering and plant breeding *Plant Protoplasts and Genetic Engineering VII* Y. Sytnik, 1984 Although only about 3 years have passed since the preparation of the original manuscript of this book for the Russian edition the number of successful experiments on somatic hybridization of higher plants has doubled Although the main inferences of the first edition still remain in force most of them have received conclusive experimental support and moreover some new conclusions have been drawn It can be expected that these inferences and conclusions will constitute a more or less durable foundation for somatic cell genetics of higher plants We thus hope this book will also remain useful over the next years in spite of the rapid progress of experiments and the increase in the number of scientific reports in this field Though it might appear strange to an uninvolved observer the principal progress in hybridization of

somatic cells of higher plants has been due to plant physiologists who entered the field by elaborating methods and techniques for plant cell and later for isolated protoplast culture rather than plant geneticists. However, further qualitative improvement in this field is inconceivable without the instillation of genetic ideology and the strict logic of genetic experiments. The main purpose of this book is the attempt to organize the available experimental data in terms and categories of genetic analysis. For this reason, this book lays no claim on being a comprehensive treatise on somatic hybridization.
