Perspectives in Biotechnology and Applied Microbiology Daham I. Alani,Murray Moo-Young,2012-12-06 Upon an invitation from Arab Bureau of Education for the Gulf States ABEGS an International Conference on Biotechnology and

Applied Microbiology was held in Riyadh Saudi Arabia 12-15 November 1984. The Conference was sponsored by ABEGS and organized through cooperation with Saudi Biological Society. SBS ABEGS was established in 1976 with the aim of coordinating, unifying and developing all aspects of Education, Culture and Science in the Gulf States. In the field of publications, ABEGS is publishing various books, pamphlets and two scientific journals, one in Arabic and the other in English, entitled the Arab Gulf Journal of Scientific Research. This volume contains topics presented by the invited speakers and selected papers from among those submitted by participants. Selection was done on basis of some of the invited talks. Main topics of the conference were grouped into sections representing seven themes of Biotechnology and Applied Microbiology: production of microbial proteins, utilization of microorganisms for the production of chemicals, microbial treatment and utilization of waste, continuous culture, application of biotechnology in plant science, applied microbiology and environment, and applied microbiology and biotechnology international cooperation between developed and developing countries. Some of the topics in this volume present surveys of recent developments in several important areas of biotechnology and applied microbiology, while the remaining papers carry detailed research contributions.

Plant Biotechnology M.W. Fowler, G.S. Warren, Murray Moo-Young, 2013-10-22. Today it is generally accepted that one of the key areas of biotechnology for the next century will be in plant-based biotechnology. Biotechnology has created new opportunities for plant scientists with important applications to agriculture and forestry. This reference text is divided into five sections for ease of presentation. The first section focuses on the structure, composition and functionality of plant cells and genes with particular emphasis on the cellular and molecular biology of plants and cultured cells. Section two

is concerned with the direct exploitation of cell cultures for the production of useful substances The third section deals with regeneration and propagation systems The fourth section considers the increasingly central area of genetic manipulation of plant cell systems The last section is on specific applications in plant biotechnology This reference work is a survey of these various facets of plant biotechnology The individual chapters and the follow up literature cited allow an easy access to the various subject areas and will hopefully stimulate interest in these rapidly moving and exciting fields of research
