Plant Cell and Tissue Culture in Liquid Systems G. Payne, V. Bringi, C. Prince, Michael L. Shuler, 1993-11-04 A practical review of a technology whose time has come The recent surge of interest in the production of plant products from cell cultures is creating increased pressure to transfer this technology from the laboratory to commercial practice This book created by four of the leading researchers in the field is specifically designed to help advance commercialization of plant cell culture for secondary metabolite production It provides a cohesive presentation of the principles and practical applications of large scale plant cell and tissue culture techniques This comprehensive survey of the state of the art in this technology Provides a practical view of plant cell and tissue culture techniques leading to Industrial scale up for production Explains important biological and metabolic components of plant cell culture Focuses on technical approaches for culturing a range of cells at different morphological levels Details engineering principles of gas transfer in bioreactor systems Gives basis for intelligent choice of appropriate bioreactor systems Examines proven strategies in useful case studies Lists extensive references for each chapter Identifies critical areas for frontier research The vast body of knowledge contained in this book will be tremendously useful to biotechnologists biochemical engineers industrial microbiologists plant biologists pharmaceutical and food industry specialists and fragrance and flavor manufacturers *Plant Tissue Culture Engineering* S. Dutta Gupta, Yasuomi Ibaraki, 2006-07-10 It is my privilege to contribute the foreword for this unique volume entitled Plant Tissue Culture Engineering edited by S Dutta Gupta and Y Ibaraki While there have been a number of volumes published regarding the basic methods and applications of plant tissue and cell culture technologies and even considerable attention provided to bioreactor design relatively little attention has been afforded to the engineering principles that have emerged as critical contributions to the commercial applications of plant biotechnologies This volume Plant Tissue Culture Engineering signals a turning point the recognition that this specialized field of plant science must be integrated with engineering principles in order to develop efficient cost effective and large scale applications of these technologies I am most impressed with the organization of this volume and the extensive list of chapters contributed by expert authors from around the world who are leading the emergence of this interdisciplinary enterprise The editors are to be commended for their skilful crafting of this important volume The first two parts provide the basic information that is relevant to the field as a whole the following two parts elaborate on these principles and the last part elaborates on specific technologies or applications

Liquid Culture Systems for in vitro Plant Propagation A.K.

Hvoslef-Eide, W. Preil, 2005-06-15 High efficiency micropropagation with relatively low labour costs has been demonstrated in this unique book detailing liquid media systems for plant tissue culture World authorities e.g. von Arnold Curtis Takayama Ziv contribute seminal papers together with papers from researchers across Europe that are members of the EU COST Action 843 Advanced micropropagation systems First hand practical applications are detailed for crops including ornamentals and trees using a wide range of techniques from thin film temporary immersion systems to more traditional aerated bioreactors with many types of explant shoots to somatic embryos The accounts are realistic balanced and provide a contemporary account of this important aspect of mass propagation This book is essential reading for all those in commercial micropropagation labs as well as researchers worldwide who are keen to improve propagation techniques and lower economic costs of production Undergraduate and postgraduate students in the applied plant sciences and horticulture will find the book an enlightened treatise

Disposable Bioreactors Regine Eibl, Dieter Eibl, 2009-11-27 Over the past five years the immense financial pressure on the development and manufacturing of biopharmaceuticals has resulted in the increasing use and acceptance of disposables which are discarded after harvest and therefore intended only for single use In fact such disposables are implemented in all the main bioprocess production stages today and an even higher growth than those in the biopharmaceutical market is predicted reaching double figures Alongside disposable filter capsules membrane chromatography units tubing connectors flexible containers processing or containing fluids freezer systems mixers and pumps and fully controlled disposable bioreactors of up to 2 000 L culture volume are already available on the market Numerous studies highlight the advantages of disposable bioreactors and reveal their potential for simple safe and fast seed inoculum production process development and small as well as middle volume production e.g. bioactive substances viruses for vaccines and gene therapies etc They suggest that such disposable bioreactors typically characterized by the cultivation chamber or bag from plastic materials may be advantageous for plant animal and microbial cells Running industrial activities such as CFD modelling development of single use process monitoring and control technology and standardized film formulations are attempting to resolve the limitations of the current disposable bioreactors These achievements along with

substantial improvements in product yield will reduce the use of stainless steel in the biomanufacturing facilities of the future
