Plant Genetic Resources B. S. Dhillon, 2006 Food is the basic need of human beings The increasing population and enhanced standard of living are placing greater demands on food related requirements in terms of quantity quality and diversity The Green Revolution which significantly enhanced productivity of important food crops nevertheless resulted in certain fallouts as genetic erosion soil degradation chemical pollution and aquifer depletion Amongst these decrease in plant genetic diversity is an irreversible loss As the basic raw material for future plant breeding plant genetic resources of foodgrains are the key to future food security Though plant breeding has attracted the attention of many authors plant genetic resources remain somewhat neglected This book gives an overall perspective current status of genetic resource of important foodgrain crops wheat rice maize barley sorghum millets pulses and legumes and underutilized crops It provides a comprehensive compilation on current status of information on origin taxonomy diversity collection exchange evaluation utilization molecular characterization and conservation for food grain crops Eminent scientists and crop specialists have critically analyzed the information in view of the present and future research priorities In addition management issue related to plant genetic resources are also discussed At present such information on these crops is lacking and this book fills in the void It shall serve as reference for genetic resource managers researchers teachers students and policy makers in biology and agriculture

**Heat Stress In Food Grain Crops: Plant Breeding and Omics Research** Uday C. Jha, Harsh Nayyar, Sanjeev Gupta, 2020-10-07 Heat Stress In Food Grain Crops Plant Breeding and Omics Research is a timely compilation of advanced research on heat stress affecting crop yield plant growth development of common food grain and cereal crops Chapters in the book cover several aspects of crop science including the identification of potential gene donors for heat tolerance physiological mechanisms of adaptation to heat stress the use of conventional and modern tools of breeding for imparting tolerance against terminal temperature stress and precise mapping of heat tolerant QTLs through biparental and genome wide association mapping The use of genomics and phenomics methods is focused on through chapters dedicated to important crops such as groundnut pearl millet maize chickpea mungbean and wheat Authors of the respective chapters explain the importance of harnessing a diverse crop gene pool for sustaining crop production under conditions of increasing heat stress Readers will be able to understand the relevance of functional genomics in elucidating candidate genes and their regulatory functions contributing to heat tolerance

**South Asia Network on Plant Genetic Resources (SANPGR)** International Plant Genetic Resources Institute, 1999 Alien Gene Transfer in Crop Plants, Volume 2 Aditya Pratap, Jitendra Kumar, 2014-02-03 Genetic engineering and biotechnology along with conventional breeding have played an important role in developing superior cultivars by transferring economically important traits from distant wild and even unrelated species to the cultivated varieties which otherwise could not have been possible with conventional breeding There is a vast amount of literature pertaining to the genetic improvement of crops over last few decades However the

wonderful results achieved by crop scientists in food legumes research and development over the years are scattered in different journals of the World. The two volumes in the series *Alien Gene Transfer in Crop Plants* address this issue and offer a comprehensive reference on the developments made in major food crops of the world. These volumes aim at bringing the contributions from globally renowned scientists at one platform in a reader friendly manner. The second volume entitled *Alien Gene Transfer in Crop Plants: Achievements and Impact* will deal more with the practical aspects. This volume will cover achievements of alien gene transfer in major food crops of the world and their impact on development of newer genetic variability and additional avenues for selection development of superior cultivars for increased yield resistance to biotic and abiotic stresses improved nutritional and industrial quality innovation of new techniques and positive as well as negative environmental implications. This volume has been divided into four groups with an aim to cover all major cereals pulses oilseeds and other crops vegetable and horticultural crops which are of economic importance. Lentil Shyam S. Yadav, David McNeil, Philip C. Stevenson, 2007-09-08. The lentil was one of the first foods ever to have been cultivated. This book presents the most comprehensive and up to date review of research on lentil production biotic and abiotic stress management quality seed production storage techniques and lentil growing around the world. This book will be of great value to legume breeders scientists nutritionists academic researchers graduate students farmers traders and consumers in the developed and the developing world. *Biology and Breeding of Food Legumes* Aditya Pratap, Jitendra Kumar, 2011. Food legumes are important constituents of the human diet and animal feed where they are crucial to a balanced diet supplying high quality proteins. These crops also play an important role in low input agricultural production systems by fixing atmospheric nitrogen. Despite systematic and continuous breeding efforts through conventional methods substantial genetic gains have not been achieved. With the rise in demand for food legumes pulses and increased market value of these crops research has focused on increasing production and improving the quality of pulses for both edible and industrial purposes. *Biology and Breeding of Food Legumes* covers the history origin and evolution botany breeding objectives and procedures nutritional improvement industrial uses and post harvest technology and also recent developments made through biotechnological intervention. *The Indian Journal of Agricultural Sciences*, 2012-07. Advances in Seed Production and Management Ajay Kumar Tiwari, 2021-02-26. High quality seed is essential for healthy crops and greater agricultural productivity. At the same time advances in breeding technology require equivalent advances in seed technology. In order to ensure food security it is crucial to develop seeds that are high yielding and resistant to drought heat cold and insects. Gathering the latest research in seed sciences the book includes contributions on seed production in crops such as legumes sugar rice wheat and other cereals. It discusses a range of topics like the effect of climate change on seed quality production and storage seed rouging seed certification for different crop species seed biology and seed pathologies and their effective management. Integrating basic and applied research this compendium provides valuable insights for researchers and

students in agricultural and life sciences professionals involved in seed certification and those working in quarantine laboratories as well as plant pathologists
