Plant Succession Theory And Prediction:

Plant Succession D.C. Glenn-Lewin, R.K. Peet, T.T. Veblen, 1992-11-30 Succession is the term used to describe the phenomenon of changes in vegetational types in both time and space The subject of the colonization and exploitation of new areas by plants is a key one in ecology and this book summarizes the theoretical arguments currently raging about the topic

Disturbance Ecology and Forest Management Paul Rogers, 1996 General Technical Report INT., 1996 **The Biology of Disturbed Habitats** Lawrence R. Walker, 2012 Providing a global summary of the biology of disturbance ecology this text offers both the conceptual underpinnings and practical advice required to comprehend and address the unprecedented environmental challenges facing humans It examines both natural and anthropogenic disturbances in aquatic and terrestrial habitats **Mediterranean Desertification** N. A. Geeson, C. J. Brandt, J. B. Thornes, 2003-04-11

Desertification includes land degradation due to both climatic and anthropogenic causes where land includes water soil and the biosphere This book presents the most recent findings from the European Community's MEDALUS project which was formed to understand and manage semi arid environments that are undergoing great change Covers climate and land use processes and responses in the Mediterranean First book to provide guidelines for the management of land degradation in Mediterranean environments Based on first hand experience of the problems by those responsible for solving them

Ecosystems of Disturbed Ground L.R. Walker, 1999-12-17 As the human population inexorably grows its cumulative impact on the Earth's resources is hard to ignore The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely Because disturbance alters resource levels effective management requires understanding of the ecology of disturbance This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground Natural disturbances such as erosion volcanoes wind herbivory flooding and drought plus anthropogenic disturbances such as forestry grazing mining urbanization and military actions are considered Both disturbance impacts and the biotic recovery are addressed as well as the interactions of different types of disturbance Other chapters cover processes that are important to the understanding of disturbance of all types including soil processes nutrient cycles primary productivity succession animal behaviour and competition Humans react to disturbances by avoiding exacerbating or restoring them or by passing environmental legislation All of these issues are covered in this book Managers need better predictive models and robust data collections that help determine both site specific and generalized responses to disturbance Multiple disturbances have a complex effect on both physical and biotic processes as they interact This book provides a wealth of detail about the process of disturbance and recovery as well as a synthesis of the current state of knowledge about disturbance theory with extensive documentation Vierteljahrsschrift der Naturforschenden Gesellschaft in Zürich Naturforschende Gesellschaft in Zürich, 1999 **Küstendünen an der**

Nordsee, 1999 *Mitteilungen der Fränkischen Geographischen Gesellschaft* Fränkische Geographische Gesellschaft, 2001

Rangelands: A Resource Under Siege P. J. Joss, P. W. Lynch, O. B. Williams, 1986 This volume comprises the proceedings of the Second International Rangelands Congress held in Adelaide Australia in May 1984 and includes some 350 contributions drawn from 43 different countries The Congress addressed the problem of the conflict between land users and the degradation of this valuable resource Some 40% of the Earth's land surface is arid or semi-arid and therefore unsuitable for agricultural cultivation Collectively these lands are known as rangelands and in their natural state they constitute a habitat for grazing animals both domestic and wild Despite their low productivity rangelands have been used for thousands of years as a source of food and fibre but other uses such as mining tourism recreation and conservation are exerting increasing demands The result is often conflict between land users and degradation of the resource New Models for Ecosystem Dynamics and Restoration Richard J. Hobbs, Katharine N. Suding, Society for Ecological Restoration International, 2009-01-07 Conceptual models based on alternative stable states and restoration thresholds can help inform restoration efforts This title explores how conceptual models of ecosystem dynamics can be applied to the recovery of degraded systems It discusses the basic concepts and models and explores implications of scientific research on restoration practice BOOK PUBLISHER WEBSITE Modelling Boreal Forest Succession at Broad Scales Dennis Yemshanov, Ajith Perera, Ontario Forest Research Institute, 2001 This bibliography was produced to assist foresters and scientists interested in modelling boreal forest succession at broad scales It contains more than 600 citations describing existing knowledge on succession in North American boreal forests and the current state of knowledge in modelling succession with particular emphasis on broad scales References on succession in boreal forests are grouped by geographic and taxonomic categories This bibliography also provides information on theories and concepts of succession modelling issues of scale in modelling succession the spatial process of propagule dispersal and the probabilistic modelling of forest succession An author index is provided to help users locate citations of interest **Old Fields** Society for Ecological Restoration International, 2007-10-12 Old Fields brings together leading experts from around the world to synthesize past and current work on old fields providing an up to date perspective on the ecological dynamics of abandoned land The book gives readers a broad understanding of why agricultural land is abandoned the factors that determine the ecological recovery of old fields and how this understanding contributes to theoretical and applied ecology Wetlands for the Future Arthur J. McComb, Jenny A. Davis, 1998 **Plant Population Biology and Vegetation Processes** Krystyna Falińska, 1998 *Community Ecology and Conservation Biology* Frank Klötzli, E. van der Maarel, 1996 *Forest Biodiversity Research, Monitoring and Modeling* Francisco Dallmeier, James A. Comiskey, 1998 Recent advances in the use of permanent plots for monitoring forest biodiversity in the Old World The theoretical framework behind plot based monitoring and a description of how plot based results have been put to a variety of uses such as defining the number of trees to be sampled in smaller plots monitoring climatic change ground truthing satellite imagery to map patterns and developing new analytical techniques for assessing patterns of diversity A final section outlines

some of the monitoring programmes and networks currently in place in Europe **Mountain Research and Development**
,1997 Spatial Patterns of White Pine Regeneration in Relation to Seed Rain, Safe Sites, Competing Vegetation and Resources Martin Dovčiak,2001 Ecological Bulletins, Suserup Skov Katrine Hahn,Jens Emborg,2007-08-06 Suserup Skov in Denmark is a well preserved beech dominated forest reserve with continuity in tree cover at least back to 4200 BC indicating it to be a direct descendent of the primeval forests Despite of documented historical impact from humans Suserup Skov is now increasingly characterized by natural disturbance dynamics and is one of the best reference areas for naturalness in the nemoral part of northern Europe This has attracted several research projects focussing on forest dynamics ecology and biodiversity which are summarized in this issue of Ecological Bulletins This volume focuses on three main areas 1 stand structures and dynamics 2 water and nutrient cycling processes and 3 vegetation patterns and processes With a compilation of scientific reviews detailed case studies and experimental works the volume provides a unique and in depth overview of structures and processes in a single forest reserve The aim is to establish a basic reference of science and practice within forestry and nature conservation
