Plasticity And Recovery Of Function In The Central Nervous System:

Plasticity and Recovery of Function in the Central Nervous System Donald G. Stein, Jeffrey J. Rosen, Nelson Butters, 1974 **Journal of Rehabilitation R & D**, 2008 **Journal of Rehabilitation Research and Development**, 2008 **Journal of Rehabilitation Research & Development**, 2008 *The Neurobiology of Central Nervous System Trauma* Steven K. Salzman, A. I. Faden, 1994 This book serves as a reference text in the field of experimental traumatology. Chapters are written by the recognized leaders in each area. The first section covers methodological considerations including discussion of in vitro and in vivo models, metabolic and hemodynamic factors, anatomical and electrophysiological correlates, and behavioral evaluation. The second section discusses pathophysiological factors including ischemia, ionic changes, immune inflammatory responses, neurotransmitter/neuromodulatory alterations, effects of lipid metabolism, astroglial responses, and molecular mechanisms. The final section reviews treatments including experimental pharmacology, growth factors, regeneration, transplantation, and clinical treatment. This book is invaluable to researchers as well as clinicians involved in head or spinal cord injury. **Plasticity and Recovery of Function in the Central Nervous System**, 1974

Development of the Central Nervous System Michael W. Miller, 1992 Disseminates information pertaining to the normal and abnormal processes involved during the development of the central nervous system. The toxic effects of alcohol or opiate usage on development are explored by examining the clinical manifestations that appear in the children of substance abusing mothers. Detailed coverage includes individual ontogenetic and developmental processes such as neural chemical differentiation, cell proliferation, and migration. **Biomedical Index to PHS-supported Research**, 1995

Environments as Therapy for Brain Dysfunction Roger Walsh, 1976-05-01 At the 1975 Winter Conference on Brain Research, a series of workshops were held to discuss the role of the sensory environment in the etiology and therapy of brain dysfunction. The participants represented a broad range of disciplines ranging from basic neuro science through human development psychology. They were linked by a common belief that the role of the sensory environment in brain dysfunction had received insufficient attention. Each had made contributions to this question in their own respective disciplines and it was hoped that this meeting would provide an opportunity for cross fertilization and synthesis. From these workshops, this book evolved. Its production would have been impossible without the help of many people. Anna Taylor's flexibility allowed the holding of a larger than normal workshop while the authors bore up well under editorial pressure to meet deadlines. Linda Coleman and Phyllis Straw provided excellent support from Plenum while Therese Linden gave editorial assistance. Valarie Munden, Rosemary Schmele, and Estelle Hoffman did an excellent job of typing. RNW was supported by a Fellowship from the Foundations Fund for Research in Psychiatry. As always, our families provided continuous support and encouragement. To all these people and more, we say thank you. Roger N Walsh M D B Med Sc Dip Psychol Ph D William T Greenough Ph D
