Plateaus Problem And The Calculus Of Variations:

Plateau's Problem and the Calculus of Variations Michael Struwe, 2014-07-14 This book is meant to give an account of recent developments in the theory of Plateau's problem for parametric minimal surfaces and surfaces of prescribed constant mean curvature H surfaces and its analytical framework A comprehensive overview of the classical existence and regularity theory for disc type minimal and H surfaces is given and recent advances toward general structure theorems concerning the existence of multiple solutions are explored in full detail The book focuses on the author's derivation of the Morse inequalities and in particular the mountain pass lemma of Morse Tompkins and Shiffman for minimal surfaces and the proof of the existence of large unstable H surfaces Rellich's conjecture due to Brezis Coron Steffen and the author Many related results are covered as well More than the geometric aspects of Plateau's problem which have been exhaustively covered elsewhere the author stresses the analytic side The emphasis lies on the variational method Originally published in 1989 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

The Problem Of Plateau: A Tribute To Jesse Douglas And Tibor Rado Themistocles M Rassias, 1992-12-21 This volume consists of papers written by eminent scientists from the international mathematical community who present the latest information concerning the problem of Plateau after its classical solution by Jesse Douglas and Tibor Rad The contributing papers provide insight and perspective on various problems in modern topics of Calculus of Variations Global Differential Geometry and Global Nonlinear Analysis as related to the problem of Plateau

Minimal Surfaces, Stratified Multivarifolds, and the Plateau Problem A. T. Fomenko, 1991-02-21 Plateau's problem is a scientific trend in modern mathematics that unites several different problems connected with the study of minimal surfaces In its simplest version Plateau's problem is concerned with finding a surface of least area that spans a given fixed one dimensional contour in three dimensional space perhaps the best known example of such surfaces is provided by soap films From the mathematical point of view such films are described as solutions of a second order partial differential equation so their behavior is quite complicated and has still not been thoroughly studied Soap films or more generally interfaces between physical media in equilibrium arise in many applied problems in chemistry physics and also in nature In applications one finds not only two dimensional but also multidimensional minimal surfaces that span fixed closed contours in some multidimensional Riemannian space An exact mathematical statement of the problem of finding a surface of least area or volume requires the formulation of definitions of such fundamental concepts as a surface its boundary minimality of a surface and so on It turns out that there are several natural definitions of these concepts which permit the study of minimal surfaces

by different and complementary methods In the framework of this comparatively small book it would be almost impossible to cover all aspects of the modern problem of Plateau to which a vast literature has been devoted However this book makes a unique contribution to this literature for the authors guiding principle was to present the material with a maximum of clarity and a minimum of formalization Chapter 1 contains historical background on Plateau's problem referring to the period preceding the 1930s and a description of its connections with the natural sciences This part is intended for a very wide circle of readers and is accessible for example to first year graduate students The next part of the book comprising Chapters 2-5 gives a fairly complete survey of various modern trends in Plateau's problem This section is accessible to second and third year students specializing in physics and mathematics The remaining chapters present a detailed exposition of one of these trends the homotopic version of Plateau's problem in terms of stratified multivarifolds and the Plateau problem in homogeneous symplectic spaces This last part is intended for specialists interested in the modern theory of minimal surfaces and can be used for special courses a command of the concepts of functional analysis is assumed **Mathematical**
