Planetary Dreams The Quest To Discover Life Beyond Earth:

Planetary Dreams Robert Shapiro, 2008-05-02 The Quest To Discover Life Beyond Earth The dreams that I write of are not the usual ones the images that come up in our minds involuntarily during certain stages of sleep but rather the hopes and expectations that we have lavished upon other worlds around us from the Preface The surprisingly long history of debate over extraterrestrial life is full of marvelous visions of what life out there might be like as well as remarkable stories of alleged sightings and heated disputes about the probability that life might actually have arisen more than once In **Planetary Dreams** acclaimed author Robert Shapiro explores this rich history of dreams and debates in search of the best current answers to the most elusive and compelling of all questions Are we alone In his pursuit he presents three contrasting views regarding how life might have started through Divine Creation by a highly unlikely stroke of luck or by the inevitable process of a natural law that he terms the Life Principle We are treated to a lively fictional dinner debate among the leading proponents of these schools of thought with the last named group arguing that life has almost surely formed in many places throughout the universe and the others that life may well be entirely unique to our own blue planet To set the stage for a deep exploration of the question the author then leads us on a fantastic journey through the museum of the cosmos an imagined building that holds models of the universe at different degrees of magnification We then journey deep into inner space to view the astonishingly intricate life of a single cell and learn why the origin of such a complex object from simple chemical mixtures poses one of the most profound enigmas known to science Writing in a wonderfully entertaining style Shapiro then reviews the competing theories about the start of life on Earth and suggests the debate may best be settled by finding signs of life on the other worlds of our solar system He takes us on a guided tour of the most likely sites from the underground hot springs of Mars to the ice covered oceans of Jupiter s airless moons Along the way he shares a wealth of fascinating stories about the ways in which our views of the heavens have changed from the theories of ancient philosophers who argued that the Moon was inhabited to the current Origins and Astrobiology initiatives of NASA He describes the probes that will be sent out in the near future in pursuit of the first compelling physical evidence of life beyond Earth and concludes with a radical suggestion about how this quest might be supported through the next millennium As we launch into an exciting new era of space exploration **Planetary Dreams** offers a thoughtful and entertaining exploration of both the history of our hopes and expectations and a vision of a possible future in which the discovery of life elsewhere will provide a new view of our place in the universe

Danielle Clode,2006-09-11 This book follows the thread of individual natural history stories through the scientists of Museum Victoria **Life's Solution** Simon Conway Morris,2003-09-04 The assassin s bullet misses the Archduke s carriage moves forward and a catastrophic war is avoided So too with the history of life Re run the tape of life as Stephen J Gould claimed and the outcome must be entirely different an alien world without humans and maybe not even intelligence The history of life is littered with accidents any twist or turn may lead to a completely different world Now this view is being challenged Simon Conway Morris explores the evidence demonstrating life s almost eerie ability to navigate to a single solution repeatedly Eyes brains tools even culture all are very much on the cards So if these are all evolutionary inevitabilities where are our counterparts across the galaxy The tape of life can only run on a suitable planet and it seems that such Earth like planets may be much rarer than hoped Inevitable humans yes but in a lonely Universe *Planetary Dreams* Robert

Shapiro,1999-03-15 Shapiro reviews the competing theories about the start of life on Earth and suggests the debate may best be settled by finding signs of life on the other worlds of our solar system He takes us on a guided tour of the most likely sites from the underground hot springs of Mars to the ice covered oceans of Jupiter s airless moons Along the way he shares a wealth of fascinating stories about the ways in which our views of the heavens have changed from the theories of ancient philosophers who argued that the Moon was inhabited to the current Origins and Astrobiology initiatives of NASA He describes the probes that will be sent out in the near future in pursuit of the first compelling physical evidence of life beyond Earth and concludes with a radical suggestion about how this quest might be supported through the next millennium

Dying Planet Robert Markley, 2005-09-08 For more than a century Mars has been at the center of debates about humanity's place in the cosmos Focusing on perceptions of the red planet in scientific works and science fiction *Dying Planet* analyzes the ways Mars has served as a screen onto which humankind has projected both its hopes for the future and its fears of ecological devastation on Earth Robert Markley draws on planetary astronomy the history and cultural study of science fiction literary and cultural criticism ecology and astrobiology to offer a cross disciplinary investigation of the cultural and scientific dynamics that have kept Mars on front pages since the 1800s Markley interweaves chapters on science and science fiction enabling him to illuminate each arena and to explore the ways their concerns overlap and influence one another He tracks all the major scientific developments from observations through primitive telescopes in the seventeenth century to data returned by the rovers that landed on Mars in 2004 Markley describes how major science fiction writers H G Wells Kim Stanley Robinson Philip K Dick Edgar Rice Burroughs Ray Bradbury Robert Heinlein and Judith Merrill responded to new theories and new controversies He also considers representations of Mars in film on the radio and in the popular press In its comprehensive study of both science and science fiction *Dying Planet* reveals how changing conceptions of Mars have had crucial consequences for understanding ecology on Earth

The Planet-Girded Suns: Our Forebears' Firm Belief in Inhabited Exoplanets Sylvia Engdahl, 2012-06-01 Interest in exoplanets the worlds of other stars is not new From the late 17th century until the end of the 19th almost all educated people believed that the stars are suns surrounded by inhabited planets a belief that was expressed not in science fiction but in serious speculation both scientific and religious as well as in poetry Only during the first half of the 20th century was it thought that life bearing exoplanets are rare This is not a science book rather it belongs to the category known as History of Ideas First published by Atheneum in 1974 it tells the story of the rise fall and eventual renewal of widespread conviction that we are not alone in the universe In this 2012 updated edition the chapters dealing with modern speculation have been revised to reflect the progress science has made during the past 40 years including the actual detection of planets orbiting other stars However it is not intended to be more than a brief introduction to today's views its focus is on little known facts about those of the past Why should we care what our forebears believed Now the question of ET life is a matter for investigation by science Yet it's significant that most educated people of past centuries were convinced that other inhabited worlds exist without any scientific evidence whatsoever This historical fact reveals that human beings have an instinctive sense of kinship with the wider universe and a desire to see the realms that lie beyond this one small planet and perhaps eventually to go there Our ancestors conceived of such voyages only in a spiritual sense as occurring after death But we who have taken our first small steps into space are aware that our descendants may set foot on the worlds of other suns Just as in the 17th century people were initially upset by the new knowledge that the stars are suns scattered in space rather than lights fixed to a nearby sphere the growing awareness that Earth is not safely isolated from whatever lies beyond makes many of our contemporaries uneasy Thus today

s predominant feelings about spaceships are ambivalent Nevertheless if an impulse toward belief that we are not alone in the universe is indeed an innate characteristic of human beings as the past spread of belief in inhabited exoplanets suggests we can be sure that those who follow us will not turn back from becoming spacefarers **Hair of the Alien Bill**

Chalker,2005-08-19 The shocking true story of a case unlike any other in the annals of UFO investigation DNA research or alien abduction July 23 1992 In Sydney Australia twenty eight year old Peter Khoury was awoken by what appeared to be two females both striking and unearthly kneeling on his bed What transpired between them was a physical assault as bizarre and disorienting as it was unnatural Then as quickly as they had arrived they vanished Khoury had become one of a legion of alien abductees with inexplicable experiences but this particular incident stood apart from all the others This time there was evidence two strands of white blond hair from one of the females Khoury s case would result in the very first forensic DNA analysis of alien abduction evidence and revealed an extraordinary biological anomaly one genetically close to human yet almost impossibly far from the human mainstream A gripping account of one of the great mysteries of our time Hair of the Alien brings us closer than ever before to understanding our past our origins and our place in the universe **Chemistry and Industry** ,1999 **The Extraterrestrial Life Debate, Antiquity to 1915** Michael J. Crowe,2008 This book presents key documents from the pre 1915 history of the extraterrestrial life debate Introductions and commentaries accompany each source document some of which are published here for the first time or in a new translation Authors included are Aristotle Lucretius Aquinas Nicholas of Cusa Galileo Kepler Pascal Fontenelle Huygens Newton Pope Voltaire Kant Paine Chalmers Darwin Wallace Dostoevski Lowell and Antoniadi among others Michael J Crowe has compiled an extensive bibliography not available in other sources These materials reveal that the extraterrestrial life debate rather than being a relatively modern phenomenon has extended throughout nearly all Western history and has involved many of its leading intellectuals The readings also demonstrate that belief in extraterrestrial life has had major effects on science and society and that metaphysical and religious views have permeated the debate throughout much of its history This is a valuable book that is not available anywhere else Crowe s purpose is to let the reader see the original words of the authors who discussed other worlds Crowe puts these documents in context by his substantial introduction and commentary Such a source book serves an important purpose and is ideal for teaching and generating discussion in class The subject is of increasing importance as we find more and more about the possibilities of extraterrestrial life through current disciplines such as astrobiology bioastronomy and the Search for Extraterrestrial Intelligence Steven J Dick Director NASA History Division NASA Having established himself as the world s authority on the history of the debates about extraterrestrial life in the eighteenth and nineteenth centuries Michael Crowe is perfectly positioned to produce this source book The introductory commentaries on the excerpts from primary sources he has so judiciously selected reveal again and again that no one else knows this subject as well as he does Frederick Gregory University of Florida The Extraterrestrial Life Debate gives new meaning to the word

treasury Michael Crowe offers us more than 2000 years of golden materials wrought by the astonishing alchemy of science religion philosophy and sheer imagination about a topic as alive today as it ever was ET with all his cousins and ancestors The range of authors the book showcases and the depth of context Crowe provides will make his monumental anthology the starting point for future explorations of this rich vein of human thought Dennis Danielson University of British Columbia There are loads of books on ET but only a small number of them take a historical approach Anyone interested in the history of the extraterrestrial life debate will be interested in this book it does complete in a certain way previous historical work done by Steven Dick and Michael Crowe by providing large portions of original texts rather than merely short quotations from them All the various perspectives religious literary astronomical philosophical seem adequately represented The multidisciplinary aspect of the debate comes across well from the authors selected Marie I George St John s University Extraterrestrials may not have invaded the Earth physically but for centuries they have done so mentally In many a guise they have appeared not only in works of fiction but also in serious astronomical philosophical and theological debate It is impossible to open Michael Crowe s handsome and fastidiously prepared anthology of primary sources without being drawn into endlessly fascinating disputes concerning the possibility and character of extraterrestrial life Savoring the many twists and turns in controversies that have extended far beyond the confines of popular astronomy Professor Crowe has provided students and experts alike with a generous and indispensable resource It is difficult to resist his invitation to investigate for ourselves the innumerable and often surprising ways in which the idea of intelligent life on other worlds has shaped and been shaped by perennial Earthly concerns John Hedley Brooke Andreas Idreos Professor Emeritus of Science and Religion University of Oxford
