

# The International Treaty on Plant Genetic Resources for Food and Agriculture

Also known as **Plant Treaty**, it is a **legally binding agreement** adopted by FAO in **2001**, entered into force in **2004**.

## TOTAL PARTIES

**149** member countries  
+  
EU (including **India**)

➤ **ICAR-NBPGR** is India's **nodal agency** for the treaty-related coordination.

It promotes the preservation and sharing of **plant genetic resources** to strengthen food security and climate resilience.

➤ It is the **first globally binding treaty** to recognize the role of **indigenous** and **smallholder farmers** in conserving agrobiodiversity.

## KEY COMPONENTS

### Multilateral System (MLS)

Lists **64 key crops** listed in **Annex I**. Enables members to **share & access** food and forage crops for research, breeding, and conservation.

### Article 9

Recognizes rights to **save, use, exchange, and sell** farm-saved material, and share benefits from genetic resources.

**Prevents exclusive rights claims** on MLS materials that could limit others from using them.

### Standard Material Transfer Agreement (SMTA)

Treaty-based contract granting **access to crops** that mandates **benefit-sharing** if the crops are used commercially.

### Benefit Sharing Fund

Financed by SMTA users and donors to support on-farm conservation and capacity-building in developing countries.

## **Plant Health And Quarantine In International Transfer Of Genetic Resources:**

**Guide to Sources for Agricultural and Biological Research** J. Richard Blanchard, Lois Farrell, 2023-07-28

**Managing Global Genetic Resources** National Research Council, Board on Agriculture, Committee on Managing Global Genetic Resources: Agricultural Imperatives, 1993-01-01 This anchor volume to the series Managing Global Genetic Resources examines the structure that underlies efforts to preserve genetic material including the worldwide network of genetic collections the role of biotechnology and a host of issues that surround management and use Among the topics explored are in situ versus ex situ conservation management of very large collections of genetic material problems of quarantine the controversy over ownership or copyright of genetic material and more *Technologies to maintain biological diversity*. United States. Congress. Office of Technology Assessment, Technologies to Maintain Biological Diversity, 1987

*Plant Breeding Reviews, Volume 3* Jules Janick, 2011-01-11 Plant Breeding Reviews is an ongoing series presenting state of the art review articles on research in plant genetics especially the breeding of commercially important crops Articles perform the valuable function of collecting comparing and contrasting the primary journal literature in order to form an overview of the topic This detailed analysis bridges the gap between the specialized researcher and the broader community of plant scientists **Containment Facilities and Safeguards for Exotic Plant Pathogens and Pests** Robert P. Kahn, S. B. Mathur, 1999 Information about containment facility design traditionally has been scattered throughout the literature or maintained in files and reports kept by national quarantine services or research organizations that develop and use these facilities With the globalization of trade it has become necessary for all parties to upgrade existing facilities and services to ensure the safe import and export of agricultural products This book brings to light containment safeguards from important international facilities in 12 countries With the publication of this comprehensive volume Kahn and Mathur fulfill the need to synthesize and make available to a large audience information about principles concepts data and guidelines relating to the design and function of a wide spectrum of containment facilities and safeguard procedures **Cyst Nematodes** F.

Lamberti, C.E. Taylor, 2012-12-06 The cyst nematodes are a major group of plant pathogens of economic importance in many countries throughout the world Considerable yield losses have been attributed to cyst nematodes attacking potatoes sugar beet soybean and cereals Because of the protective cyst that is formed which encloses the eggs they pose special problems in their control and also in preventing their distribution in soil from infested areas There has been much research on many aspects of the biology of cyst nematodes and the large number of publications are testimony to their importance as crop pests and of the interest of nematologists in the group Nevertheless they continue to pose problems because of the complexity of their phylogeny and taxonomy and there is still much to be investigated on their biology particularly with those aspects which relate to improving the effectiveness of control In many respects the biology of the various cyst nematode species is similar although with variations due to different interactions with hosts and geographical location Thus research on

any one species has general applicability and this is particularly so with regard to evaluation of control measures or to the methodology of soil sampling for the assessment of populations prior to growing crops     Plant Health and Quarantine in International Transfer of Genetic Research William Boright Hewitt, Chiarappa, Chemical Rubber Company, 1977 Plant health problems of a general nature Pathological Nematological Entomological Problems of seeds and selected crop plants Methods for detection and control of seed borne fungi and bacteria Seed borne viruses Banana Musa spp Cashew Anacardium occidentale L Cassava Manihot esculenta Crantz Citrus Cocoa Theobroma cacao L Coconut Cocos nucifera L Coffee Coffea spp Date palm Phoenix dactylifera L Grapevine and temperate fruits Vitis Malus Pyrus Prunus Cydonia and Amygdalus spp Oil palm Elaeis guineensis Jacq Ornamental bulbs and corms fungi bacteria and insect pests Ornamental bulbs and corms virus and virus like pathogens Potato Solanum tuberosum L viruses and mycoplasma like organisms Rubber Hevea brasiliensis M Small fruits Fragaria Rubus Ribes and Vaccinium spp Sugarcane Saccharum spp Sweet potato Ipomoea batatas L Tea Camellia sinensis L Kuntz Plant quarantine and the transfer of germplasm Plant quarantine principles methodology and suggested approaches Quarantine policy for seed in transfer of genetic resources Post entry and intermediate quarantine stations Phytosanitary regulations and the transfer of genetic resources     *Mededeling* , Consists of articles reprinted from various other journals     **Operations Manual for National Clonal Germplasm Repositories** ,1986     **Plant Disease Control** Otis C. Maloy, 1993-07-09 Combines theoretical principles with practical applications in dealing with viral fungal and bacterial diseases of plants Covers exclusion techniques eradication by chemical or physical means biological control fungicides pathogen free seeds and vegetative material Includes a wide range of examples     *Multipurpose Tree Germplasm* International Council for Research in Agroforestry, 1984     Germplasm Resources and Genetic Improvement of Vegetable Crops in the Tropics Prem Nath, Taysir Badra, Lanre Denton, 1987     **Conservation of Crop Germplasm** William L.
