The Plant Life of China Geoffrey P. Chapman, Yin-Zheng Wang, 2014-01-15 **Plant Diversity Patterns and Drivers** Qing Zhang, Gang Feng, Jinliang Liu, 2024-09-20 Biodiversity can provide a series of important ecosystem functions and ecosystem services which meet the needs of human beings Plants are the biological group with the highest carbon content on earth their diversity has attracted increased attention The interpretation of plant diversity patterns and drivers is crucial for the conservation and utilization of plant resources and is also one of the hot topics in plant science and ecology There are already many studies on the patterns and drivers of plant diversity including different diversity dimensions e g taxonomic phylogenetic and functional diversity and spatial scales different plots sites watershed country continent and globe The mechanisms underlying plant diversity patterns are also quite complex For example many hypotheses are related to contemporary climate and soil conditions with temperature precipitation and soil nutrient being the most discussed drivers In addition paleoclimate and geological events may also have a strong legacy on current plant diversity patterns Except for these natural factors many anthropogenic activities including agriculture deforestation grazing urbanization and coal mining are also important drivers of plant diversity These anthropogenic activities can affect plant diversity patterns not only directly but also indirectly through their effects on habitat loss and habitat fragmentation Therefore the current plant diversity patterns are the result of many interacting factors and need to be interpreted from a more comprehensive perspective This Research Topic will therefore provide a platform for sufficient communication aiming to integrate the research from different fields and deepen the understanding of the patterns and drivers of plant diversity We encourage the submission of theoretical and experimental studies on different plant groups such as seed plants ferns mosses and algae Studies based on new methods and technology such as genomics and drones are also welcomed We welcome the following specific topics Effects of historical factors such as paleoclimate geological events on plant diversity Plant diversity that driven by contemporary climate and anthropogenic activities The effect of habitat loss and fragmentation on plant diversity New methods of research on the patterns and drivers of plant diversity *Temporal Patterns and Mechanisms of Biodiversity Across Scales in East Asia* Zehao Shen, George P. Malanson, Jinlong Zhang, Meng Yao, 2021-07-27 **Biodiversity Hotspots** Vittore Rescigno, 2010 Current loss of biodiversity places a premium on the task of recognising and formulating proposals on potential areas for biological conservation based on scientific criteria among these tasks identification of hotspots has a relevant role on conservation of biodiversity In this book the authors discuss the application of different biogeographic methods to identify plant biodiversity hotspots The areas recognised as such have a relevant role in plant biodiversity and are important in conservation due to their climatic conditions the historical factors that have been involved in their evolution and the restricted distribution of some plant taxa that inhabit them Furthermore the consequences of deforestation on biodiversity are substantial and widely recognised This book predicts future land use change generates ecological niches of

large mammals and assesses wildlife concentrations and their hotspots in different areas of the world The evolution of the forest fragmentation in the Brazilian Atlantic forest the present situation of its remnants and the main strategies conflicts and potentials for conservation are evaluated as well *The Kew Record of Taxonomic Literature Relating to Vascular Plants for ...* ,1997 *Mountainous Forest Ecosystems: Challenges and Management Implications* Shreekar Pant,Jahangeer A.
