Jordan,1993 The transition from vegetative to reproductive growth is one of the most important developmental changes in plants Although the physiology of the process has been well documented the molecular basis has only recently begun to be determined This book reviews our current knowledge of the molecular biology and genetics of flowering a subject that is rapidly being recognized for both its fundamental importance and its biotechnological exploitation It will interest research workers and advanced students in plant genetics and plant molecular biology **Current Topics in Plant Physiology** ,1989 The Development of Flowers Richard I. Greyson,1994 This unique volume presents a developmental view of the flower and its organs in contrast with more traditional treatments of phylogeny and comparative morphology Individual chapters on the perianth androecium and gynoecium explore the flower s four organ types from the perspectives of organ initiation from the floral meristem and organ growth differentiation maturation and function The many illustrations highlight potential candidates as model systems Also explored are the developmental aspects of inflorescences and the flowers of grasses highlighting flower and inflorescence development in *Zea Triticum Orqza* and *Lolium* The book concludes with a discussion of the partial processes and components of flower development which might be considered as sources of morphogenetic and developmental control In addition to the critical genetic components the roles of plant growth substances organelles and microtubules and microfibrillar components of wall placement are reviewed The author persuasively argues that flower development is best interpreted as a multidimensional interactive process in which many potential points for control of individual minor reactions can be identified This book is a must for researchers and students in botany plant molecular biology and plant physiology Tobacco Abstracts ,1992 **The Effects of Boron Deficiency on the Reproductive Processes of Almond (*Prunus Dulcis* [Mill] D.A.
