Shepherd, 2019-07-22 No detailed description available for Human Plasma Lipoproteins *Plasma Lipoproteins* Antonio M. Gotto, 1987 In this rapidly evolving field of research an enormous amount of new knowledge of lipoprotein structure function and metabolism has emerged The 1985 Nobel Prize winning pioneering work of Brown and Goldstein on the LDL receptor has had a profound impact on developments in the field This work is one of the many subjects reviewed in detail in this book The volume begins with chapters on structure then proceeds to analysis of lipid and lipoprotein dynamics metabolism function genetics and molecular biology Lipoprotein genetics in molecular biology the role of lipoprotein receptors and Lp a a topic underrepresented in volumes on lipoproteins are another three such topics in an impressive volume This work will mainly be of interest to researchers interested in lipid and lipoprotein structure and metabolism but will also be of great value to clinical medicine and biology in general *The Lipoproteins; Methods and Clinical Significance* Freddy Homburger, Peter Bernfeld, 1958 Research Awards Index, 1983 *HDBK ELECTROPHORESIS LIPOPROTEINS BASIC CONCEPTS* Lena Armstrong Lewis, Jan J. Oppl, 1983-10-05 **The Lipoprotein Molecule** Hubert Peeters, 2012-12-06 The amount of recent information collected about the molecular composition structure and function of the plasma lipoproteins in man as well as in experimental animals is very large In this volume an assessment of our knowledge as it stands today has been organized within a framework of four general topics the first about analytical data the second about structure the third about metabolism and the last about molecular variation and pathology Thus the analytical theoretical experimental and applied aspects of the topic have been treated in conjunction with each other The analytical data in human and nonhuman primates were obtained after ultracentrifugal or electrophoretic separation of the protein class from the native serum Comparisons of various methods were not forgotten The main categories of lipoproteins namely High Density HDL Low Density LDL and Very Low Density VLDL are treated separately and lipid moiety and the polypeptide moiety are carefully described In the theoretical field of reassembly of lipoprotein particles by relipidizing delipidated polypeptides the structural aspects of lipoprotein and the stabilizing effect of phospholipids on the polypeptide structure were studied The opposite direction of the process namely degradation of a lipoprotein by means of lipolytic enzymes has also been investigated and described Lipids and Lipoproteins M. Fondu, 1980 Abstract Symposium proceedings of the Federation of Margarine Associations focused on lipids and lipoproteins Structure and emergence of lipoproteins and metabolic problems related to LDC and HDL are discussed Alcohol's influence on lipoproteins and diabetes in clinical studies is reviewed along with biochemical studies specifically corticosteroid biosynthesis and polyunsaturated fatty acids effects in heart muscle Epidemiological papers dietary studies and fat processing technologies are examined Extensive knowledge exists about
