**Fusion Physics** MITSURU KIKUCHI, 2002-01-01 Humans do not live by bread alone Physically we are puny creatures with limited prowess but with unlimited dreams We see a mountain and want to move it to carve out a path for ourselves We see a river and want to tame it so that it irrigates our fields We see a star and want to fly to its planets to secure a future for our progeny For all this we need a genie who will do our bidding at a flip of our fingers Energy is such a genie Modern humans need energy and lots of it to live a life of comfort In fact the quality of life in different regions of the world can be directly correlated with the per capita use of energy 1 1 1 5 In this regard the human development index HDI of various countries based on various reports by the United Nations Development Programme UNDP 1 6 Fig 1 1 which is a parameter measuring the quality of life in a given part of the world is directly determined by the amount of per capita electricity consumption Most of the developing world 5 billion people is crawling up the UN curve of HDI versus per capita electricity consumption from abysmally low values of today towards the average of the whole world and eventually towards the average of the developed world This translates into a massive energy hunger for the globe as a whole It has been estimated that by the year 2050 the global electricity demand will go up by a factor of up to 3 in a high growth scenario 1 7 1 9 The requirements beyond 2050 go up even higher      **Journal of the Physical Society of Japan** Nihon Butsuri Gakkai, 1998

**Confinement in the Phaedrus-T Tokamak** Dana H. Edgell, 1997      **Tokamak Plasma** B. B. Kadomtsev, 1992 The importance of tokamaks and their role in fusion reactors has been known for some time but it is only now that plasma physicists have reached a clear understanding of the major principles governing the behaviour of confined high temperature plasma This book gives a timely and comprehensive survey of these concepts as well as a simple presentation of the basic physics involved The topics discussed include the theory of plasma equilibrium and its main instabilities semi empirical approaches for investigating heat transport major plasma instabilities restricting the region of a tokamak s operating modes

a variety of plasma confinement regimes and other phenomena such as MARFE magnetic bubbles and fishbones The author proposes a new mechanism for anomalous heat transport connected with the idea of microscale island structure The information is presented in a clear and systematic way which will make this book interesting and useful to a broad spectrum of scientists and engineers involved in fusion reactor research an excellent book authoritative broad and bristling with insight Professor R D Hazeltine The University of Texas at Austin La Rivista del Nuovo cimento ,1999 *Astrophysical and Laboratory Plasmas* A.J.
