Rubia In Flux:

Quantum Computing and Quantum Bits in Mesoscopic Systems Anthony Leggett, Berardo Ruggiero, Paolo Silvestrini, 2012-12-06 Quantum information science is a new field of science and technology which requires the collaboration of researchers coming from different fields of physics mathematics and engineering both theoretical and applied Quantum Computing and Quantum Bits in Mesoscopic Systems addresses fundamental aspects of quantum physics enhancing the connection between the quantum behavior of macroscopic systems and information theory In addition to theoretical quantum physics the book comprehensively explores practical implementation of quantum computing and information processing devices On the experimental side this book reports on recent and previous observations of quantum behavior in several physical systems coherently coupled Bose Einstein condensates quantum dots superconducting quantum interference devices Cooper pair boxes and electron pumps in the context of the Josephson effect In these systems the book discusses all required steps from fabrication through characterization to the final basic implementation for quantum computing

The Origin and Dynamics of Solar Magnetism M.J. Thompson, A. Balogh, J.L. Culhane, Å. Nordlund, S.K. Solanki, J.-P. Zahn, 2009-05-01 Starting in 1995 numerical modeling of the Earth's dynamo has flourished with remarkable success Direct numerical simulation of convection driven MHD flow in a rotating spherical shell show magnetic fields that resemble the geomagnetic field in many respects they are dominated by the axial dipole of approximately the right strength they show spatial power spectra similar to that of Earth and the magnetic field morphology and the temporal variation of the field resembles that of the geomagnetic field Christensen and Wicht 2007 Some models show stochastic dipole reversals whose details agree with what has been inferred from paleomagnetic data Glatzmaier and Roberts 1995 Kutzner and Christensen 2002 Wicht 2005 While these models represent direct numerical simulations of the fundamental MHD equations without parameterized induction effects they do not match actual planetary conditions in a number of respects Specifically they rotate too slowly are much less turbulent and use a viscosity and thermal diffusivity that is far too large in comparison to magnetic diffusivity Because of these discrepancies the success of geodynamo models may seem surprising In order to better understand the extent to which the models are applicable to planetary dynamos scaling laws that relate basic properties of the dynamo to the fundamental control parameters play an important role In recent years first attempts have been made to derive such scaling laws from a set of numerical simulations that span the accessible parameter space Christensen and Tilgner 2004 Christensen and Aubert 2006

Breeding Research on Aromatic and Medicinal Plants
Christopher B Johnson, Chlodwig Franz, 2024-11-01 The field of medicinal aromatic plant breeding is growing and changing this resource will help you stay up to date In this essential book researchers from large and small laboratories and institutions throughout Europe and the Mediterranean region explore recent developments in the selection and breeding of aromatic and medicinal plants They take varied approaches from traditional breeding to the use of molecular markers and complement them with up to date information on biodiversity and resource conservation From the editors It is widely recognized that a strategy of conservation through use by which plant collection via wild harvesting is replaced by controlled cultivation is the best way forward if we are to balance human demands with the necessary conservation of the biodiversity represented by these species That provides one major driving force for research in this field Another concerns the very real need for improving the quality control of products on the market both to satisfy consumer demand and to conform with the justifiably increasing requirements for standardization and precise identification of the composition of the plant materials being sold for human use We hope that this volume will give readers a taste of the exciting developments in the field Breeding Research on Aromatic and Medicinal Plants examines breeding for resistance and abiotic factors manipulating natural product accumulation through genetic engineering biochemical and molecular regulation of essential oil accumulation economic and legal considerations that breeders will encounter the ethical aspects of breeding these plants
