Rotatable Designs of Second and Third Order in Three Or More Dimensions Raj Chandra Bose, Norman Richard Draper, 1958     **Higher-dimensional modelling of geographic information** Ken Arroyo Ohori, 2016-03-02 Higher dimensional modelling of geographic information     Algorithms in Combinatorial Geometry Herbert Edelsbrunner, 2012-12-06 Computational geometry as an area of research in its own right emerged in the early seventies of this century Right from the beginning it was obvious that strong connections of various kinds exist to questions studied in the considerably older field of combinatorial geometry For example the combinatorial structure of a geometric problem usually decides which algorithmic method solves the problem most efficiently Furthermore the analysis of an algorithm often requires a great deal of combinatorial knowledge As it turns out however the connection between the two research areas commonly referred to as computational geometry and combinatorial geometry is not as lop sided as it appears Indeed the interest in computational issues in geometry gives a new and constructive direction to the combinatorial study of geometry It is the intention of this book to demonstrate that computational and combinatorial investigations in geometry are doomed to profit from each other To reach this goal I designed this book to consist of three parts a combinatorial part a computational part and one that presents applications of the results of the first two parts The choice of the topics covered in this book was guided by my attempt to describe the most fundamental algorithms in computational geometry that have an interesting combinatorial structure In this early stage geometric transforms played an important role as they reveal connections between seemingly unrelated problems and thus help to structure the field     Algorithms and Computation Ding-Zhu Du, Xiang-Sun Zhang, 1994-07-27 This volume is the proceedings of the fifth International Symposium on Algorithms and Computation ISAAC 94 held in Beijing China in August 1994 The 79 papers accepted for inclusion in the volume after a careful reviewing process were selected from a total of almost 200 submissions Besides many internationally renowned experts a number of excellent Chinese researchers present their results to the international scientific community for the first time here The volume covers all relevant theoretical and many applicational aspects of algorithms and computation

Lee, Danny Z Chen, Shi Ying, 2010-07-12 This book constitutes the refereed proceedings of the 4th International Frontiers of Algorithmics Workshop FAW 2010 held in Wuhan China in August 2010 The 28 revised full papers presented together with the abstracts of 3 invited talks were carefully reviewed and selected from 57 submissions The Workshop will provide a focused forum on current trends of research on algorithms discrete structures and their applications and will bring together international experts at the research frontiers in these areas to exchange ideas and to present significant new results The mission of the Workshop is to stimulate the various fields for which algorithmics can become a crucial enabler and to strengthen the ties between the Eastern and Western research communities of algorithmics and applications     Cassell's Household Guide: Being a Complete Encyclopaedia of Domestic and Social Economy, Etc Cassell &
