Orbital and Reentry Vehicles Laurence E. Fogarty,Robert Milton Howe,1961 Three translational and three rotational
equilibrium equations for an orbital vehicle subject to aerodynamic and jet reaction forces are derived using a modified flight
path axis system for the translational equations Dependent variables of the system are horizontal velocity component vertical
velocity component and flight path heading angle Resulting equations are shown to have advantages for computer
mechanization over alternative axis systems for the translational equations Complete equations for determining vehicle
orientation instantaneous latitude and longitude angle of attack angle of sideslip aerodynamic forces and moments etc are
presented Modifications in the translational equations which allow direct solution by an analog computer are also given
Analog computer mechanization of these equations in both real and fast time is described including a novel technique for
