## **Psycho Social Matrix Of Psychiatry:**

*The Psychosocial Matrix of Psychiatry* Michael Shepherd, 1983      Communication Jurgen Ruesch, Gregory Bateson, Eve C. Pinsker, Gene Combs, 2017-07-12

The integration of psychiatry into the mainstream of American society following World War II involved rethinking and revision of psychiatric theories. While in the past theories of personality had been concerned with the single individual, this pioneering volume argues that such theories are of little use. Instead, the individual must be seen in the context of social situations in which rapid advances in communication technology have brought people closer together, changing their behavior and self-expression. Ruesch and Bateson show that following World War II, mass communication and culture have become so pervasive that no individual or group can escape their influences for long. Therefore, they argue that processes of psychoanalysis must now consider the individual within the framework of a social situation. Focusing upon the larger societal systems of which both psychiatrist and patient are an integral part, they develop concepts that encompass large-scale events as well as happenings of an individual nature. They have outlined this relationship in a unified theory of communication which encompasses events linking individual to individual, individual to the group, and ultimately to events of worldwide concern. The term social matrix then refers to a larger scientific system of which both the psychiatrist and the patient are integral parts.

Jurgen Ruesch was professor of psychiatry at the University of California School of Medicine and director of the section of Social Psychiatry at the Langley Porter Neuropsychiatric Institute in San Francisco. Gregory Bateson taught at Columbia University, the New School for Social Research, Harvard University, Stanford University, and the University of California Santa Cruz. Among his books are *Naven*, *Steps to an Ecology of Mind*, *Mind and Nature*, *A Necessary Unity*, *Angels Fear*, *Towards an Epistemology of the Sacred*, and *A Sacred Unity*. Further *Steps to an Ecology of Mind*.

**Communication, the Social Matrix of Psychiatry (Classic Reprint)** Jurgen Ruesch, 2017-09-17 Excerpt from Communication the Social Matrix of Psychiatry This phenomenon we have related to the more general problem of part and whole 15 The physician and the psychiatrist in their work repeatedly deal with relationships between one cell and the surrounding tissue one organ within an organism an individual within the family group a family within the community and ultimately perhaps the community within the framework of the nation and the nation within the United Nations These varied foci of interest are usually watched and studied by different disciplines all using their own concepts and their separate technical languages Such divisions though useful at one stage can become merely obstructions at a later stage Therefore in order to facilitate progress we propose to use one single system for the understanding of the multiple aspects of human behavior As of today we believe that communication is the only scientific model which enables us to explain physical intrapersonal interpersonal and cultural aspects of events within one system By the use of one single system we eliminate the multiplicity of single universes the multifarious vocabularies and the controversies which arise because we the scientists and clinicians cannot understand each other To introduce the reader to such a system of explanation in its application to the field of psychiatry the present volume has been written At this time the reader may ask what if any relationship exists between communication and the variety of topics which are presented in this volume In reply we ask him to bear with us for a little while until such time as we have been able to demonstrate how value theory psychiatric thinking and observations about the American culture are intimately connected We hope to show that these multifarious features which are included under the heading of social matrix are the silent determinants of our means of communication and that communication is the link which connects psychiatry with all other sciences It is well to remember that almost all phenomena included under the heading of psychopathology are disturbances of communication and that such disturbances are in part defined by the culture in which they occur Contemporary psychiatric theories were imported from Europe by Europeans and inasmuch as psychiatric theories are implicitly theories of communication they must undergo modification and progressive change when transplanted from one country to another Therefore considerable time and space have here been devoted to an understanding of the American system of communication and its implicit influence upon psychiatric practices and thinking About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
