Introduction

Heart transplantation is a potentially life-saving procedure for people with terminal cardiac disease and refractory to medical or surgical treatment. The period between being listed for transplantation and receiving a heart has a morbidity of around 50% have been found in these patients, mainly depressive and anxiety disorders. Psychological data are available. [1], [2]

Purpose

Describe the psychopharmacological treatment profile and make an approach to the most commonly used drugs. The objective was to describe the cardiological and psychiatric features of these patients.

Methods

125 adult patients included consecutively in waiting list for HT between 2006 and 2012 (7 year period) were evaluated. All the patients were previously assessed by the HT medical team committee of Hospital Clínic de Barcelona and were suitable for being included in the program and meet general cardiology criteria for HT candidates (HT is indicated in those patients with severe heart failure, who underwent all other medical and surgical options, being the heart failure severely disabling with severe risk of death). We analyzed the following variables: age, sex, years of disease progression, etiology of cardiopathy, axis I disorders applying structured clinical interview for DSM-IV and Hospital Anxiety and Depression Scale (HADS), and description of psychopharmacological pattern. We used descriptive statistics such means, averages and percentages.

Results

Demographic and clinical characteristics:

On average, the 125 patients of the sample were aged 55.47 ± 10.9 years. 98 were male (78.4%) and 27 female (21.6%). The mean of cardiac disease progression was 9.86 ± 8.2 years. The main etiologies of cardiopathy were ischemic cardiomyopathy (41.6%), non-ischemic cardiomyopathy (28.8%) and valvular cardiomyopathy (12%).

Psychopharmacological treatment profile:

A 31.2% of the sample (39 patients) was treated with psychopharmacological drugs at time of inclusion in waiting list, with this distribution: Benzodiazepines 16%; Selective Serotonin Reuptake Inhibitors 6.4%; Selective Serotonin Reuptake Inhibitors + Benzodiazepines 5.6%; Serotonin-Norepinephrine Reuptake Inhibitors 1.6% and other antidepressants 1.6%. No patient received treatment with antipsychotics or mood stabilizers. (Figure 1)

Psychiatric evaluation:

Axis I diagnoses were present in a 30.4% of patients of the sample, all of them included in depressive, anxiety, sleep and adjustment disorders. The mean score of HADS was 11.52 ($SD = 6.3$), with a mean score of 6.54 ($SD = 3.8$) in anxiety subscale and 4.97 ($SD = 3.3$) in depression subscale.

Conclusions

About one third of patients in waiting list phase showed an axis I diagnosis and received psychopharmacological treatment. Selective Serotonin Reuptake Inhibitors was the most used group of antidepressants (used in 12% of the sample). The clinical characteristics of our sample are similar to other studies.

Pharmako-Psychiatrie Helmut Selbach, 1977 Textbook of Integrative Mental Health Care James H. Lake, 2011-01-01

Dr Lake has made a significant contribution to integrative medicine in this book by helping to weave the integral tapestry around the complex issues of mental illness. In honor of his efforts to restore healing and meaning to mental healthcare, I bow deeply. From the foreword by Larry Dossey MD, Dr James Lake once again illumines the path to future medicine in this comprehensive, carefully researched and intellectually engaging exploration of clinical integration of complementary and conventional therapies in mental health care. In a rigorous, dispassionate analysis, he both reveals the outer frontiers of medical possibility and describes the professional boundaries necessary to reach such frontiers in ways that are clinically responsible as well as ethically unassailable. Michael H. Cohen, JD, MBA, Assistant Clinical Professor, Department of Medicine, Harvard Medical School and Assistant Professor, Department of Health Policy and Management, Harvard School of Public Health. Dr Lake has written the defining textbook for evidence-based integrative mental health care. He has comprehensively evaluated the research support for both conventional and natural therapies and redefined how we understand and treat mental health patients. His careful flow charts help guide the clinician through the challenge of assessment and differentiation to personalize therapies based on each patient's unique needs. Clinicians will also find of immense value his many tables which summarize the evidence base for each intervention. This is a tour de force that forever redefines mental health care. Joseph Pizzorno, ND, Founding President, Bastyr University. This text offers an evidence-based approach to incorporating integrative psychiatry into practice that is pragmatic and useful, a great addition to the field of integrative medicine. Roberta Lee, MD, Medical Director, Continuum Center for Health and Healing. Dr Lake must be congratulated for this ground-breaking work on CAM in psychiatry. It not only provides a conceptual framework for a deeper understanding of disease of the mind/body/spirit but also gives evidence-based blueprints for where we are and where we could go. A must read for mental health professionals interested in the philosophy and practice of integrative psychiatry. Richard P. Brown, MD, Associate Professor, Department of Clinical Psychiatry, Columbia College of Physicians and Surgeons. This text is comprehensive and authoritative, well-written and widely referenced. It will, I hope, enlarge the way we think about mental health and treat psychiatric disorders. James S. Gordon, MD, Founder and Director of the Center for Mind/Body Medicine. This book provides a comprehensive review of integrative approaches in mental health. Here, the practitioner will find clear guidance in an evidence-based manner. A wonderful contribution. Wayne B. Jonas, MD, Director, Samueli Institute for Information Biology. This book is a tour de force in the emerging field of integrative psychiatry. The author presents the

material in each chapter in a systematic thoughtful thorough and practical manner The text itself is integrative in the way it discusses management issues that a provider may encounter As the number of patients who already include or wish to add alternative methods in their overall treatment plan continues to grow this text provides an important comprehensive resource for busy providers Health care professionals from many different disciplines who need a serious reference text on integrative psychiatry and who wish to optimize options for their patients with chronic psychiatric disorders will find this book indispensable Iris R Bell MD PhD Professor Departments of Family and Community Medicine Psychiatry Psychology Medicine and Public Health The University of Ariz Psychopharmacology Abstracts ,1981 *Communications in Psychopharmacology* ,1977 **Current Developments in Psychopharmacology** Walter B.
