Depression Conceptualization and Treatment

Christos Charis, Georgia Panayiotou, 2021-05-03 Depression a highly common clinical disorder is an important and clinically relevant topic for both clinical researchers and practitioners to address because of its prevalence impact on the individual and society association with other mental and physical health problems and the social contexts in which it develops Depression ranks in Germany and central Europe as the third among the leading mental disorders and world wide is a leading cause of disability It is estimated that 8.3 % of the German population is depressed within a year 11.2 % women 5.5 % men These statistics mean that 4 million people per year are depressed in Germany alone one year prevalence According to the WHO over 300 million people world wide experience depression and in the USA the financial burden of this disorder due to disability and work absenteeism reaches Depression is also becoming more frequent over time and has a high risk of recidivism particularly since its most common form Major Depressive Disorder DSM 5 ICD10 tends to occur in episodes For example 20% to 40% of people become depressed again within two years after their first depressive episode meaning that a major aim of any therapeutic intervention should be to prevent future relapses Depression also shows very high comorbidities with other mental and physical health conditions Its overlap with anxiety pathology is so high that clinicians are concerned with whether the two disorder categories are indeed distinct or if they show substantial etiological overlap Depression is also associated with heart disease and even cancer making it a risk factor for mortality and morbidity that needs to be identified early and addressed effectively In addition to Major Depressive Disorder the often severe Bipolar Disorder and the chronic form of Depression referred to as dysthymia are additional mood disorders that among them require careful differential diagnosis They also lead to questions regarding their common or distinct etiological mechanisms In order to gain a better understanding of Depression as a clinical disorder one needs to look at it as a multifaceted phenomenon Depression is a neurobehavioral condition and one has to be up to date and have solid understanding of its biological substrate at a genetic neuronal hormonal and pharmacological level Depression is also a socio demographic phenomenon and one needs to examine its epidemiology that might contain significant cues towards its clearer understanding It is more prevalent for example in certain regions climates age groups and genders much more prevalent in women with age of appearance in young adulthood but also presents as a significant problem for youth and the elderly is associated with stereotypes and stigma and can be the aftermath of crises trauma and loss The etiology of Depression remains under scrutiny though recently much more knowledge is emerging from contemporary neuroimaging genotyping and data science methods Different neural and behavioral systems may be involved contributing to the significant heterogeneity within the disorder Social roles stressors attachment patterns family support and social networks and individual e.g gender linked vulnerabilities may contribute significantly towards increasing risk for developing depression Different therapeutic

approaches like those stemming from the psychoanalytic psychodynamic perspectives and those stemming from the cognitive behavioral 2nd and 3rd wave tradition focus on the components of etiology considered most dominant As science progresses with clearer evidence regarding the important etiological factors and their interactions these different perspectives each with its own contribution may need to take new developments into consideration adapt and even begin to converge These different aspects of the topic of Depression which are central to the scientific aims of clinical scientists but also permeate the way clinicians approach assessment diagnosis case formulation and treatment become the focus of the present volume Following a conference held at the University of Cyprus in Nicosia Cyprus in October 2019 which included presentations by internationally renowned experts in the field on these various aspects of Depression the idea of extending the topics presented and discussed at the meeting into more elaborated and substantive chapters and synthesizing them into an edited volume was generated The aim was to fill a substantive gap with a volume that would be beneficial to a wider interdisciplinary audience of clinicians trainees and researchers with examine the different aspects of Depression In this Edited volume with contributions from prominent experts in the field we propose to discuss the subject of conceptualizing and treating Depression and related conditions e g Suicide Bipolar Disorder from different theoretical perspectives and after taking into consideration current research into the etiology and maintenance of this condition Chapters on theoretical perspectives of treatment cover a wide range of approaches that could be broadly clustered under behavioural and psychodynamic points of view Perspectives discussed in this volume are psychodynamic therapy 2nd waver CBT acceptance and commitment therapy and mentalization therapy Special topics with great relevance to treatment include treatment in different levels of care e g partial hospital setting prevention of suicide working with cancer patients The book provides a unique combination of current empirical findings on etiology of depression and suicide treatment considerations and practical recommendations treatment in different settings and combination of different theoretical perspectives that can enrich a therapists repertoire of tools for understanding and approaching depression The book describes various theoretical approaches without adhering to anyone but with an effort to highlight common underlying themes like issues of loss self esteem guilt grief and emotion regulation as these permeate the various perspectives In this way the book presents a combination of science and practice and of various views that constitute an excellent resource of researchers clinicians and students of mental health professions In a final chapter the two editors Drs Christos Charis and Georgia Panayiotou make an effort to impartially integrate information from the various perspectives highlighting the utility of each approach to address specific vulnerability and etiological factors discussed in the book In this regard the volume stresses the idea of the need for continuous and open dialogue between perspectives theories levels of investigation research areas practitioner needs and scientific views to help make progress in treatment and address this complex and multi faceted phenomenon in the service of patients their carers and societies in general

Psychodynamic Treatment of Depression Fredric N. Busch, Marie

Rudden, Theodore Shapiro, 2016-03-17 Psychodynamic Treatment of Depression addresses the use of psychodynamic psychotherapy both alone and in combination with cognitive behavioral interpersonal and medication treatments as a method for reducing the psychological vulnerabilities that may predispose patients to persistent symptoms or recurrence of depression Thoroughly revised and with new material the second edition reflects changes codified in the DSM 5 classification and is intended for use by students residents or clinicians who are trained in the practice of psychotherapy The authors extensive clinical experience is thoroughly mined to provide techniques for tailoring the psychodynamic psychotherapeutic approach to patients with depression and important topics such as narcissistic injury and vulnerability guilt defense mechanisms and suicidality are addressed The book is written in an accessible style and structured logically to support the acquisition and enhancement of psychotherapeutic skills through the systematic exploration of the psychodynamic model of depression The volume s noteworthy content and features are many Just as patients responses to medications vary responses to particular therapeutic interventions are different in different patients Accordingly the authors locate psychodynamic psychotherapy within the context of current treatments for depression including indications and contraindications A multitude of detailed and compelling clinical vignettes clearly illustrate the dynamics and techniques and facilitate learning across diverse clinical roles and practice settings A chapter on psychodynamic approaches to depression with comorbid personality disorder has been added to the new edition because these disorders have been found to have an adverse effect on treatment outcome including diminished response to antidepressants reduced adherence to treatment and longer time period to achieve remission There is a growing evidence base for the effectiveness of psychodynamic psychotherapy both alone and in tandem with other treatment modalities Psychodynamic Treatment of Depression offers a robust model of psychodynamic therapy for depression and the detailed strategies and techniques clinicians need to improve outcomes with this significant patient group

Strength Based Perspective in Working with Clients with Mental Illness Kam-Shing Yip, 2008 This book offers to serve as a guide for professionals in understanding and applying a strength based perspectives for Chinese clients with mental illness and to discuss the Chinese articulation of concepts and practice of these perspective within Chinese culture Ever since the emergence of a medical model in the explanation of mental illness the disease model or deficit problem orientation became the dominant paradigm in perceiving treating and rehabilitating persons with mental illness The terms mentally ill and mental patient serve as labels for both professionals family caregivers and members of community to describe the burden the needs of care and treatment for persons with mental illness These labels also justify the establishment and implementation of mental health services Under the influences of the disease model persons with mental illness are regarded as subjects for academic research patients for treatment clients for intervention and objects for stigmatisation and labelling

Psychology of Depression IntroBooks Team, Depression is a type of mood disorder in which a person is unable to carry out his her day to day activities properly and may also go through suicidal feelings and

begin to think that it isn't worth to live life. It is also known as Major Depressive Disorder or Clinical Depression which greatly affects a person's way of thinking, feeling, and behavior that can lead to a variety of emotional and physical problems. It causes a person to have constant feelings of sadness and loss of interest. All classes of people, be it adults or children, suffer through the problem of depressive disorder. The people with depressive disorder exhibit problems in carrying out normal day to day activities such as school work, social activities, relationships with others, etc. Depression is caused due to different reasons and on the basis of the cause of depression it has been categorized into various types. Often people feeling low resort themselves to the use of drugs and alcohol in an attempt to make their pain go away. The extended use of these substances might cause one to become addicted to its use which results in lowering the self-esteem of the person and his/her mood may become even lower than usual over the duration of the use of these substances. All of this causes depression. Depression can also be caused due to general medical conditions if a person is suffering from a mental illness or a physical illness for a long period of time. The depressive disorder highly interferes with the psychology of the brain to a great extent. Therefore many different types of psychological theories have been formulated which provide evidence-based explanations as to why the people behave, think, and feel in a particular manner. It is crucial that proper diagnosis of the illness is made before moving forward with the treatment of depression. Different types of depression treatment methods have been formulated for treating different types of depression. Proper diagnosis of depression is carried out through the means of face to face interviews, physical exams, medical history, and several lab tests.
