Sharing Secrets:

Sharing Secrets with Stalin Bradley F. Smith, 1996 As engaging as it is astonishing this book provides extremely important revelations and striking pen portraits etched in acid of the main actors Certainly the sources are fabulous John Erickson author of *The Road to Stalingrad* A well written account filled with original material and documentation Good reading for anyone interested in the history of WWII intelligence Publishers Weekly starred review Visual Cryptography and Secret Image Sharing Stelvio Cimato, Ching-Nung Yang, 2017-12-19 With rapid progress in Internet and digital imaging technology there are more and more ways to easily create publish and distribute images Considered the first book to focus on the relationship between digital imaging and privacy protection *Visual Cryptography and Secret Image Sharing* is a complete introduction to novel security methods and sharing control mechanisms used to protect against unauthorized data access and secure dissemination of sensitive information Image data protection and image based authentication techniques offer efficient solutions for controlling how private data and images are made available only to select people Essential to the design of systems used to manage images that contain sensitive data such as medical records financial transactions and electronic voting systems the methods presented in this book are useful to counter traditional encryption techniques which do not scale well and are less efficient when applied directly to image files An exploration of the most prominent topics in digital imaging security this book discusses Potential for sharing multiple secrets Visual cryptography schemes based either on the probabilistic reconstruction of the secret image or on different logical operations for combining shared images Inclusion of pictures in the distributed shares Contrast enhancement techniques Color image visual cryptography Cheating prevention Alignment problems for image shares Steganography and authentication In the continually evolving world of secure image sharing a growing number of people are becoming involved as new applications and business models are being developed all the time This contributed volume gives academicians researchers and professionals the insight of well known experts on key concepts issues trends and technologies in this emerging field **Code Based Secret Sharing Schemes:**

Applied Combinatorial Coding Theory Patrick Sole, Selda Calkavur, Alexis Bonnet, Romar Dela Cruz, 2022-04-11 Secret sharing schemes form one of the most important topic in Cryptography These protocols are used in many areas applied mathematics computer science electrical engineering A secret is divided into several pieces called shares Each share is given to a user of the system Each user has no information about the secret but the secret can be retrieved by certain authorized coalition of users This book is devoted to such schemes inspired by Coding Theory The classical schemes of Shamir Blakley Massey are recalled Survey is made of research in Combinatorial Coding Theory they triggered mostly self dual codes and minimal codes Applications to engineering like image processing and key management of MANETs are highlighted

Strong Brands, Strong Relationships Susan Fournier, Michael Breazeale, Jill Avery, 2015-06-12 From the editor team of the ground breaking *Consumer Brand Relationships Theory and Practice* comes this new volume *Strong Brands Strong*

Relationships is a collection of innovative research and management insights that build upon the foundations of the first book but takes the study of brand relationships outside of traditional realms by applying new theoretical frameworks and considering new contexts. The result is an expanded and better informed account of people's relationships with brands and a demonstration of the important and timely implications of this evolving sub-discipline. A range of different brand relationship environments are explored in the collection including online digital spaces, consumer collectives, global brands, luxury brands, branding in terrorist organizations and the brand relationships of men and transient consumers. This book attends to relationship endings as well as their beginnings, providing a full life cycle perspective. While the first volume focused on positive relationship benefits, this collection explores dysfunctional dynamics, adversarial and politically charged relationships and those that are harmful to well-being. Evocative constructs are leveraged including secrets, betrayals, anthropomorphism, lying, infidelity, retaliation and bereavement. The curated collection provides both a deeper theoretical understanding of brand relationship phenomena and ideas for practical application from experiments and execution in commercial practice. **Strong Brands, Strong Relationships** will be the perfect read for marketing faculty and graduate students interested in branding dynamics as well as managers responsible for stewarding brands.

Secure Information Management Using Linguistic Threshold Approach Marek R. Ogiela, Urszula Ogiela, 2013-08-19. In recent years, cryptographic techniques for protecting and hiding secret information have been included in directions of research on intelligent information management. Data can be managed securely due to the use of algorithms for ensuring the confidentiality of data, information splitting techniques as well as protocols for sharing information and methods of its reconstruction. This is why techniques of advanced splitting and reconstruction of information form the primary subject of **Secure Information Management Using Linguistic Threshold Approach**, whose main purpose is to discuss the so-called linguistic threshold schemes for information sharing. An attempt is also made to describe the opportunities of using these techniques to create new models of managing strategic information shared within a commercial organisation or a state institution. Such information is specially protected and its contents are used only if the authorised users are enabled to access it. This monograph attempts to define a model structure of information flow and for assigning information shares to particular groups of individuals concerned. The proposed information flow model can be integrated into practical solutions within any organisation or institution, improving the functionality of its legacy information systems. The use of strong mathematical cryptographic models to manage information constitutes a scientific innovation and a demonstration of the methods and opportunities of using advanced techniques for confidentially exchanging information in tasks supporting data flow within a commercial organisation. The interdisciplinary nature of the solutions proposed means that the subject of linguistic threshold schemes, forming part of intelligent information management, becomes a new challenge for the research and application work carried out. The authors of this monograph hope that it will guide readers on an interesting journey through the cutting edge solution in the field of secure information management.
