Marketing Case Studies in Emerging Markets Dilip S. Mutum, Soo Yeong Ewe, Ezlika M. Ghazali, Racheal Louis Vincent, 2024-04-01 There is an increasing interest in emerging markets because of the higher economic growth rates compared to developed economies. However, these markets have a diverse consumer base with unique needs and preferences. As a result, companies in these markets face different challenges and opportunities. Unfortunately, there is a lack of marketing cases from these markets. This book presents actual real world marketing cases in these markets offering an in depth look at some of the issues faced by companies in different industries. It is hoped that the cases would serve as valuable reference material for academics, students, professionals in marketing, business strategy and other related fields as well as policymakers to better understand the challenges of these markets and develop strategies to succeed in them. **Riding the Energy**

Transition Reda Cherif, Fuad Hasanov, Aditya Pande, 2017-05-22 Recent technological developments and past technology transitions suggest that the world could be on the verge of a profound shift in transportation technology. The return of the electric car and its adoption like that of the motor vehicle in place of horses in early 20th century could cut oil consumption substantially in the coming decades. Our analysis suggests that oil as the main fuel for transportation could have a much shorter life span left than commonly assumed. In the fast adoption scenario, oil prices could converge to the level of coal prices about 15 per barrel in 2015 prices by the early 2040s. In this possible future, oil could become the new coal.

Non-Petroleum Automotive Transportation Carl Arthur MacCarley, 2025-07-17 Non-Petroleum Automotive Transportation addresses the broad topic of energy and environmental sustainability for automotive transportation in a balanced, comprehensive and readable way. Readers will gain a basic understanding of the characteristics, advantages and limitations of all viable alternatives to fossil fuels as well as the basics of internal combustion engines. Fuels include ethanol, methanol, hydrogen, biodiesel, biomethane, natural gas, ammonia, dimethyl ether and synthetic e-Fuels and methods to calculate the carbon emissions and power output limits for each are covered. The technologies' operation efficiency and overall emissions of battery electric, hybrid electric and hydrogen fuel cell vehicles will be analyzed and compared with all other vehicle fueling options. Also covered are the fueling and charging infrastructure, challenges, energy resource requirements, indirect environmental impacts, safety and economic ramifications of the transition from gasoline and diesel fuel to electric and renewable fuels. The interdependence of transportation with solar, wind, electric energy storage and emerging renewable energy sources is discussed. The book concludes with an overview of the effect of incentives and carbon credits on the direction of automotive energy and suggestions for future career and investment opportunities enabled by this revolution.

The Model Engineer and Electrician, 1904. Description and comparison of offline and online retail environments for cars. Irene Anne McLaughlin, 2016-09-26. Essay from the year 2015 in the subject Business economics, Trade and Distribution, grade 64%. University of Ulster course BSc Business Studies, language English, abstract: Car retailing is an increasing challenge with the steady decline in the size of dealer networks. Those that continue to operate are looking at ways of improving profitability. The internet has suffered from difficulties in this sector as evidenced by the departure of companies such as Autoquake and Tesco Cars. To compare the offline and online sales of cars, consideration of the potential reach of consumers is required, looking at the growth of the internet and potential customer base. Internet usage has grown from 16 million users in 1995 to 3,035 million users in 2014. The use of Smart Phones for web search is growing at an immense rate. In countries such as Africa, where Internet coverage is sparse, data usage is being pushed by organisations.
