Planning Support Systems In Practice:

Planning Support Systems in Practice Stan Geertman (géographe)., John Stillwell, 2003 Planning Support Systems Technologies that are Driving Planning Michael Batty Centre for Advanced Spatial Analysis CASA University College London 1 19 Torrington Place London WC 1 E 6BT United Kingdom I had always thought the term Planning Support Systems abbreviated to PSS had been coined by the father of land use modelling Britton Harris in his article Beyond Geographic Information Systems computers and the planning professional published in the Journal of the American Planning Association in 1989 Harris 1989 Until I asked him that is In a response to a paper he gave to the Urban and Regional Information Systems Association URISA in the summer of 1987 he told me that someone in the audience who he cannot quite remember actually coined the term referring to planning support systems as that constellation of digital techniques such as GIS which were emerging to support the planning process In fact the predecessor term decision support systems DSS from which this unknown originator obviously defined PSS by analogy was coined as far back as the late 1970s in the management literature for a loose assemblage of techniques usually computer based which aided management decisions The term slowly entered the geographical lexicon as spatial decision support systems SDSS and this is probably first attributable to Lew Hopkins and Mark Armstrong who used it in a paper published in AutoCarto 7 in 1985 Hopkins and Armstrong 1985 Planning Support Systems in Practice Stan Geertman, John Stillwell, 2002-10-07 The first worldwide overview of Planning Support Systems PSS and their application in practice PSS are geo technology related instruments consisting of theories information methods tools et cetera for support of unique professional public or private planning tasks at any spatial scale The aim is to advance progress in the development of PSS which are far from being effectively integrated into the planning practice The text provides an Internet based worldwide inventory of innovative examples and successful applications of PSS in a number of different planning contexts In depth insights into the purposes content workings and applications of a very wide diversity of PSS are given **Planning Support Systems Best Practice and New Methods** Stan Geertman, John Stillwell, 2009-05-01 Planning Support Systems Retrospect and Prospect It has been nearly twenty years since the term planning support systems PSS first appeared in an article by Britton Harris Harris 1989 and more than ten years since the concept was more broadly introduced in the academic literature Harris and Batty 1993 Batty 1995 Klosterman 1997 As a result the publication of a new book on PSS provides an excellent opportunity to assess past progress in the field and speculate on future developments PSS have clearly become very popular in the academic world This is the fourth edited book devoted to the topic following Brail and Klosterman 2001 Geertman and Stillwell 2003 and a third by Brail 2008 Papers devoted to PSS have been published in the leading planning journals and the topic has become a regular theme at academic conferences around the world it has even spawned intellectual offspring such as spatial planning and decision support systems SPDSS and public participation planning support systems PP PSS However as Geertman and Stillwell point out in their introductory chapter the

experience with PSS in the world of professional practice has been disappointing A substantial number of PSS have been developed but most of them are academic prototypes or one off professional applications that have not been adopted elsewhere

Usefulness of Planning Support Systems, 2015 This dissertation starts by observing Chapter 1 that the question of supporting planning and policy making with dedicated information is an old and important one In the end of the 1980s a research field emerges dedicated to specifically cater instruments to the needs of practitioners so called Planning Support Systems PSS PSS can be defined as geo information based instruments that incorporate a suite of components that collectively support some parts of a unique professional planning task PSS is often software which supports understanding and evaluating planning decisions While the instrumental characteristics of PSS have improved significantly over the last two decades this has not resulted in intensive usage in planning and policy practice Earlier research has shed light on the bottlenecks preventing this higher frequency of usage It has hardly been studied however what it means for planning practice if a PSS is indeed used How can the usefulness of Planning Support Systems for planning practice be conceptualized and how do practitioners experience this The following six chapters answer different aspects of this research question Chapter 2 has a chiefly conceptual focus It emphasizes the collaborative and communicative nature of contemporary planning whereas PSS traditionally come from a scientific analytical approach to planning This chapter argues that a better role of PSS can particularly be found in a careful conceptualization of knowledge The role of PSS in planning particularly lies in gathering and testing the knowledge claims that are brought forward by different stakeholders Chapter 3 and Chapter 4 report about the added value of PSS applications as perceived by practitioners A conceptual framework is developed in which added value is measured on the individual group and outcome level In a Group Decision Room workshop particularly communication and collaboration are emphasized as important added values of PSS The questionnaires indicate that particularly learning is as an important added value of PSS Chapter 5 focuses in detail on interdisciplinary learning part of of learning about others which is conceived as frame reflection by stakeholders three disciplinary frames about planning and PSS an analytic frame a design frame and a negotiation frame The two case studies reveal that a PSS can both have a positive and a negative effect on interdisciplinary communication Chapter 6 and Chapter 7 focus on the planning tasks that are supported by the application of the PSS In both chapters the concept of task technology fit is used which refers to the extent to which the support capabilities of a PSS i e the technology influence the extent to which planning tasks are successfully conducted The findings indicate that a PSS is particularly useful when applied selectively In the conclusion Chapter 8 the overarching finding is discussed that PSS are to be particularly useful when applied selectively Facilitation could play a key role in achieving this In future research it is important that the perspective of practitioners is kept in mind particularly since the recent attention for smart cities and big data tends to have a chiefly technological focus
