Applications of Genetic Engineering to Crop Improvement G.B. Collins, Joseph F. Petolino, 2012-12-06 The contributions of plant genetics to the production of higher yielding crops of superior quality are well documented These successes have been realized through the application of plant breeding techniques to a diverse array of genetically controlled traits Such highly effective breeding procedures will continue to be the primary method employed for the development of new crop cultivars however new techniques in cell and molecular biology will provide additional approaches for genetic modification There has been considerable speculation recently concerning the potential impact of new techniques in cell and molecular biology on plant improvement These genetic engineering techniques should offer unique opportunities to alter the genetic makeup of crops if applied to existing breeding procedures Many questions must be answered in order to identify specific applications of these new technologies This search for applications will require input from plant scientists working on various aspects of crop improvement This volume is intended to assess the interrelationships between conventional plant breeding and genetic engineering

Plant Genetic Engineering B.B. Biswas, J. M. R. Gatehouse, V. A. Hilder, D. Boulter, 1992 Most estimates of the total loss of worldwide agricultural production to pests pathogens and weeds suggest figures of between 20 and 40 percent A major goal therefore in current plant biotechnology is the modification of plant genomes to produce crops with enhanced resistance to pests pathogens and herbicides This will

permit crop protection with reduced levels of application of chemical insecticides and fungicides and the more selective use of herbicides This book reviews our current knowledge of this rapidly advancing field and will be of great interest to plant biotechnologists and genetic engineers as well as workers in plant pathology or agricultural entomology wishing to keep abreast of the subject *The Methodology of Plant Genetic Manipulation: Criteria for Decision Making* Alan C.

Cassells,Peter Jones,2012-12-06 A range of novel techniques is available to the plant breeder today to complement classical breeding methods The new options are based on the integration of advances in plant cell biology with those in plant molecular biology Plant cell tissue and organ cultures provide efficient systems for transformation for the achievement of wide crosses and for the production of variation through spontaneous and induced mutation while permitting effective isolation of desired genotypes by in vitro selection This book presents a critical appraisal of the methodologies of plant genetic manipulation for advanced undergraduates postgraduates researchers and plant breeders and provides guidance on the choice of breeding options The latter depends on the breeding system of the crop the breeding objective and the tissue culture systems applicable to the target genotype s *Genetic Engineering of Crop Plants* G. Grierson,2013-10-22 Genetic Engineering of Crop Plants is a proceeding of The 49th Nottingham Easter School in Agricultural Science which was held at Sutton Bonington on April 17 21 1989 This symposium discussed progress in the generation of crop species resistant to herbicides viruses and insects The book discusses topics such as the genetic manipulation in plants genetic engineering of crops for insect and herbicide resistance the expression of heat shock gene in transgenic plants and tuber specific gene expression The book also covers topics such as regulation of gene expression in transgenic tomato plants the molecular biology of pea seed development and the regulatory elements of maize storage protein genes The text is recommended for experts in the field of botany agriculture and genetics who would like to know more about the improvement of crop plants through genetics *Advances in New Technology for Targeted Modification of Plant Genomes* Feng Zhang,Holger Puchta,James G. Thomson,2015-04-21 Over the past 50 years biotechnology has been the

major driving force for increasing crop productivity Particularly advances in plant genetic engineering technologies have opened up vast new opportunities for plant researchers and breeders to create new crop varieties with desirable traits Recent development of precise genome modification methods such as targeted gene knock out knock in and precise gene replacement moves genetic engineering to another level and offers even more potentials for improving crop production The work provides an overview of the latest advances on precise genomic engineering technologies in plants Topics include recombinase and engineered nucleases mediated targeted modification negative positive selection based homologous recombination and oligo nucleotide mediated recombination Finally challenges and impacts of the new technologies on present regulations for genetic modification organisms GMOs will be discussed **Genetic Modification of Plants** Frank

Kempken,Christian Jung,2009-12-15 Conceived with the aim of sorting fact from fiction over genetically modified GM crops

this book brings together the knowledge of 30 specialists in the field of transgenic plants. It covers the generation and detection of these plants as well as the genetic traits conferred on transgenic plants. In addition, the book looks at a wide variety of crops, ornamental plants, and tree species that are subject to genetic modifications, assessing the risks involved in genetic modification as well as the potential economic benefits of the technology in specific cases. The book's structure, with fully cross-referenced chapters, gives readers a quick access to specific topics, whether that is comprehensive data on particular species of ornamentals or coverage of the socioeconomic implications of GM technology. With an increasing demand for bioenergy and the necessary higher yields relying on wider genetic variation, this book supplies all the technical details required to move forward to a new era in agriculture. *Plants, Genes, and Crop Biotechnology* Maarten J.

Chrispeels, David E. Sadava, 2003. This book integrates many fields to help students understand the complexity of the basic science that underlies crop and food production. **The Green Phoenix** Paul F. Lurquin, 2001-09-05. Providing the first account of the story behind genetically engineered plants, Paul F. Lurquin covers the controversial birth of the field, its sudden death, phoenixlike reemergence, and ultimate triumph, as not only a legitimate field of science but a new tool of multinational corporate interests. In addition, Lurquin looks ahead to the potential impact this revolutionary technology will have on human welfare. As Lurquin shows, it was the intense competition between international labs that resulted in the creation of the first transgenic plants. Two very different approaches to plant genetic engineering came to fruition at practically the same time, and Lurquin's account demonstrates how cross-fertilization between the two areas was critical to success. The scientists concerned were trying to tackle some very basic scientific problems and did not foresee the way that corporations would apply their methodology. With detailed accounts of the work of individual scientists and teams all over the world, Lurquin pieces together a remarkable account.
