Engineering the Plant Factory for the Production of Biologics and Small-Molecule Medicines

Domenico De Martinis, Rosella Franconi, Eugenio Benvenuto, Edward P. Rybicki, Kazuhito Fujiyama, 2017-04-27 Plant gene transfer achieved in the early 80s paved the way for the exploitation of the potential of gene engineering to add novel agronomic traits and or to design plants as factories for high added value molecules For this latter area of research the term Molecular Farming was coined in reference to agricultural applications in that major crops like maize and tobacco were originally used basically for pharma applications The concept of the green biofactory implies different advantages over the typical cell factories based on animal cell or microbial cultures already when considering the investment and managing costs of fermenters Although yield stability and quality of the molecules may vary among different heterologous systems and plants are competitive on a case to case basis still the plant factory attracts scientists and technologists for the challenging features of low production cost product safety and easy scale up Once engineered a plant is among the cheapest and easiest eukaryotic system to be bred with simple know how using nutrients water and light Molecules that are currently being produced in plants vary from industrial and pharmaceutical proteins including medical diagnostics proteins and vaccine antigens to nutritional supplements such as vitamins carbohydrates and biopolymers Convergence among disciplines as distant as plant physiology and pharmacology and more recently as omic sciences bioinformatics and nanotechnology

increases the options of research on the plant cell factory Farming for Pharming biologics and small molecule medicines is a challenging area of plant biotechnology that may break the limits of current standard production technologies The recent success on Ebola fighting with plant made antibodies put a spotlight on the enormous potential of next generation herbal medicines made especially in the name of the guiding principle of reduction of costs hence reduction of disparities of health rights and as a tool to guarantee adequate health protection in developing countries

Technology of Functional Cereal Products B R Hamaker, 2007-11-08 Cereal grains and their fractions contain many health protecting compounds such as phytochemicals vitamins and indigestible carbohydrates but the texture and taste of functional cereal products can be less than ideal This important collection reviews technologies for producing a wide range of cereal products with different health promoting properties and more acceptable sensory quality The first part of the book discusses the health effects of cereals with chapters on topics such as whole grain foods cereal micronutrients and resistant starch Consumer perception of health promoting cereal products and regulatory and labelling issues are also described The second part focuses on technologies to improve the quality of functional cereal products reviewing issues such as grain improvement novel cereal derived ingredients and formulation of low GI products Chapters dedicated to a wide range of product types are also included covering cereal foods made from oats rye barley and speciality grains and breads fortified with vitamins and minerals soy and omega 3 lipids among others Technology of functional cereal products is an essential reference for all those involved in research and development of health promoting cereal based foods Reviews technologies for producing a wide range of cereal products Discusses the health effect of cereals including whole grain foods and cereal micronutrients Describes consumer perception of health promoting cereal products

Advances on Genomics and Genetics of Horticultural Crops and their Contribution to Breeding Efforts, volume II Eleni Tani, Aliko Xanthopoulou, Christos Bazakos, 2024-03-06 Horticultural crops are an excellent source of vitamins antioxidants and fibers that play an important role in human health The discovery of modern genomic tools the continuous generation of genomic data and the application of comparative and functional genomics are high importance innovations with numerous applications in crop breeding The utilization of all these new techniques in combination with the analysis of genomic data using bioinformatics tools contribute to a better understanding of the function of various agronomic traits of interest as well as horticultural crops breeding Over the last few years novel genome editing tools such as the CRISPR Cas9 have been developed and revolutionized molecular technologies due to their simplicity high efficiency and specificity

Frontiers in Molecular Pharming Muhammad Sarwar Khan, 2021-12-09 The advent of large scale production and clinical trials of drugs developed through diverse production routes involving viruses microbes plants and animals has increased the demand for an expanded capacity for pharmaceutical manufacturing The production and purification of expressed proteins

accounts for the bulk of the manufacturing costs for new therapeutics Several pharmaceutical proteins have been synthesized by exploiting plant genetics allowing producers to override conventional approaches used to manufacture pharmaceuticals The process of inserting a gene into a host organism for the purpose of harvesting a bioactive molecule for therapeutic use is known as molecular pharming *Frontiers in Molecular Pharming* covers an array of topics relevant to understanding the structure function regulation and mechanisms of action biochemical significance and usage of proteins and peptides as biomarkers therapeutics and vaccines for animals and humans The contributions aim to highlight current progress in three areas including system biology in vivo characterization of proteins and peptides molecular pharming for animals and molecular pharming for humans The book gives special attention to computational biology tools production platforms and fields such as immunoinformatics and applications of molecular pharming such as veterinary therapeutics A balance of theoretical concepts and practical applications is provided through 13 chapters *Frontiers in Molecular Pharming* is an invaluable resource for students and researchers of biochemistry molecular biology and biotechnology The book also serves as a springboard for understanding the process of how discoveries in protein and peptide research and its applications are coming to fruition
