Plasticity Of Development:

Developmental Plasticity Eugene Gollin, 2012-12-02 Developmental Plasticity Behavioral and Biological Aspects of Variations in Development explores the behavioral and biological aspects of variations in development from a variety of theoretical viewpoints and research contexts Topics covered include evolution and genetic variability sensory bases of infant perception and learning and ethology The infancy of human learning processes is also discussed along with epistemology and developmental psychology Comprised of eight chapters this book opens with a review of the broad evolutionary landscape and the specific genetic mechanisms implicated in biological and behavioral development It then describes the sensory apparatus available to neonatal human beings and analyzes the similarities and differences between ethological theory and learning theory Developmental plasticity is also examined in interdisciplinary contexts while the acquisition of behavior patterns during early postnatal development is explored from a traditional learning theory point of view The remaining chapters focus on the role played by asymmetry in general and by cerebral asymmetry in particular in the generation of individuality cultural and biological instances of plasticity in development and the barriers separating epistemology from developmental psychology and psycholinguistics This monograph will be a useful resource for developmental psychologists and other professionals devoted to child development and learning as well as those in the fields of genetics and behavioral and biological sciences

Dooling, 1991 Plasticity of Development brings together innovative current research on the nature nurture issue and presents new comparative approaches to epigenetic processes processes in which environmental signals act upon the genome Plasticity of Development brings together innovative current research by Jerome Kagan Stephen Suomi Sandra Scarr Patricia Kuhl Peter Mader and Pasko Rakic on the nature nurture issue and presents new comparative approaches to epigenetic processes processes in which environmental signals act upon the genome from the fields of child psychology animal learning brain development and psycholinguistics The studies address important issues concerning continuity of developmental processes the nature of biological and environmental signals controlling epigenetic mechanisms and the adaptive significance of developmental pathways An introduction discusses theories of self organizing systems including the important concept of canalization which is taken up in chapters by Mader Rakic Kagan and Suomi Central to the study of development canalization encompasses the

idea that genetic information supports a self organizing process that is guided by environmental input but that also provides a set of buffers against abnormal environmental and even genetic information Kagan and Suomi describe continuity in developmental processes in humans and in Rhesus monkeys revealing that in at least one important personality characteristic response to challenge and stress the behaviors and physiological correlates are strikingly similar Scarr investigates the role of adoption and home environment on developmental continuity and shows that to a surprising extent children create the environmental niches they fill Kuhl provides additional insight into the nature of the biological and environmental signals controlling epigenetic programs through her work on the development of speech perception in human children The issue she raises of what is general and what is special in human speech perception and language development bears directly on the open versus closed teaming systems observed by Mader for oscine songbirds In the most detailed account of the biological and environmental signals controlling epigenesis Pasko Rakic describes the ontogenetic processes that produce the primate cerebral cortex
