considered especially the practice of calculating cost per unit. Instead, this book offers a process that directly answers the critical question: If we accept the proposed decision, will the performance of the organization improve? The process involves the intuition of the key people in the organization together with the relevant data to come up with the best available information from which to form a reasonable range of net profit when the considered decision is added on top of all the other activities undertaken by the organization. The process is explained and demonstrated using a variety of cases where the organization faces a new, non-trivial idea along with a detailed explanation of how it should work, including software support that provides very quick response to many "what if" suggestions. This book offers a new and well-defined process applicable to every organization that considers both financial impacts and capacity limitations and also includes the impact of uncertainty by providing the range of reasonable results rather than one number which is always proven wrong in the end. Overall, the book provides a holistic method for simplified decision making in seemingly complex or shifting environments using a constraints mindset to facilitate companies' realization for the first time of their true potential.
