Plant Architecture and Its Manipulation Colin G. N. Turnbull, 2005 Development regulation genetic molecular
Annual Plant Reviews, Plant Architecture and its Manipulation Colin G. N. Turnbull, 2009-02-05 Annual Plant Reviews Volume 17 Conventionally architecture relates to buildings embracing both art and science and specifying both form and function In scope this closely matches the study of plant architecture From an artistic perspective we might marvel at the astonishing diversity of aesthetically pleasing plant structures yet as scientists we know that through natural selection very little of form is dissociated from function The origins of studies of plant architecture and their influences on human existence are steeped in history but from a twenty first century perspective the field has been transformed from a discipline of observation and description into one in which complex networks of genetic chemical and environmental factors can be directly manipulated and modelled Arguably manipulation of plant architecture has been one of the greatest mainstays of plant improvement perhaps second only to the discoveries of the nutritional requirements of plants With the advent of the gene revolution there are countless new opportunities for selective modification of plant architecture This book provides a broad coverage of our current understanding of plant architecture and its manipulation ranging from the architecture of the individual cell to that of the whole plant It is directed at researchers and professionals in plant physiology developmental biology molecular biology genetics and biotechnology Annual Plant Reviews, Flowering and its Manipulation Charles Ainsworth, 2008-04-15 The flowering plants now dominate the terrestrial ecosystems of the planet and there are good reasons for supposing that the flower itself has been a major contributing factor to the spread of the Angiosperms The flowers of higher plants not only contain the organs of plant reproduction but are of fundamental importance in giving rise to fruits and seeds which constitute a major component of the human diet This volume opens with a chapter describing a model for the evolution of the Angiosperm flower Chapters 2 to 5 describe the core development of the flower and include floral induction floral patterning and organ initiation floral shape and size and inflorescence architecture Chapters 6 to 8 focus on more specialised aspects of floral development monoecy cytoplasmic male sterility and flowering in perennials Chapters 9 and 10 address more functional aspects flower colour and scent The book concludes appropriately with a chapter on flower senescence Applied aspects are stressed wherever appropriate and the book is directed at researchers and professionals in plant genetics developmental and molecular biology The volume has been designed to complement an earlier volume in our Annual Plant Reviews series O'Neill S D and Roberts J A 2002 Plant Reproduction **Annual Plant Reviews, Control of Primary Metabolism in Plants** William Plaxton, Michael T. McManus, 2006-06-05 The ability to control the rates of metabolic processes in response to changes in the internal or external environment is an indispensable attribute of living cells that must have arisen with life's origin This adaptability is necessary for conserving the stability of the intracellular environment which is in turn essential for maintaining an efficient functional state The advent of genomics proteomics and

metabolomics has revolutionised the study of plant development and is now having a significant impact on the study of plant metabolism and its control In the last few years significant advances have been made with the elucidation of enzyme gene families and the identification of new proteinaceous and allosteric regulators The first part of this volume is devoted to generic aspects of metabolic control with chapters on the key control points in pathways Part Two considers the control of specific pathways with detailed descriptions including structures and discussions of the regulation of these pathways particularly in terms of the enzymology The book is directed at researchers and professionals in plant biochemistry physiology molecular biology and cell biology

The scale dependence of ecological processes and patterns as well as their analysis is a long standing theme in ecology The problem of scaling has three components i direct measurements are commonly limited to small scales in time and space ii the most pressing problems have to be addressed at comparatively large scales but iii direct upscaling fails when local processes differ from those relevant at larger scales The contributions collected in this volume evolved from the workshop Multiple Scales in Ecology held in March 2005 at Seddinger See near Potsdam in Germany The book is organized along four major themes scale dependent pattern formation scale identification multiscale analysis and scaling in applications
