

Microinstabilities

Microinstabilities are highly localised instabilities (wavelength comparable to the Larmor radius) that can trigger turbulences and therefore cause the anomalous transport. Discussed are in particular

- Electron drift wave instability
- Ion temperature gradient (ITG or η_i) instability

$$\omega^2 = -k_{\perp}^2 v_{Ti}^2 \left(\eta_i - \frac{2}{3} \right) \quad \eta_i \equiv \frac{d \ln T_i}{d \ln n_i}$$

- Electron temperature gradient (ETG or η_e) instability

- Trapped electron mode (TEM), Trapped ion mode (TIM)
trapped particles: the parallel dynamics is less important
dissipative or collisionless

- Microtearing instability
if electromagnetic phenomena are considered

Aspects of Anomalous Transport in Plasmas Radu Balescu,2005-04-01 Anomalous transport is a ubiquitous phenomenon in astrophysical geophysical and laboratory plasmas and is a key topic in controlled nuclear fusion research Despite its fundamental importance and ongoing research interest a full understanding of anomalous transport in plasmas is still incomplete due to the complexity of the nonlinear phenomena involved *Aspects in Anomalous Transport in Plasmas* is the first book to systematically consider anomalous plasma transport theory and provides a unification of the many theoretical models by emphasizing interrelations between seemingly different methodologies It is not intended as a catalogue of the vast number of plasma instabilities leading to anomalous transport instead it chooses a number of these and emphasizes the aspects specifically due to turbulence After a brief introduction the microscopic theory of turbulence is discussed including

quasilinear theory and various aspects of renormalization methods which leads to an understanding of resonance broadening mode coupling trajectory correlation and clumps The second half of the book is devoted to stochastic transport using methods based on the Langevin equations and on Random Walk theory This treatment aims at going beyond the traditional limits of weak turbulence by introducing the recently developed method of decorrelation trajectories and its application to electrostatic turbulence magnetic turbulence and zonal flow generation The final chapter includes very recent work on the nonlocal transport phenomenon Physica B + C. ,1985 **Journal of the Physical Society of Japan** ,1981
