Plastics And Rubbers:

Easy Identification of Plastics and Rubbers Guénaëlle A. L. Verleye, Noel P. G. Roeges, Marc O. De Moor, 2001 Polymers are found in every aspect of daily life Materials must be carefully selected to ensure that properties match performance requirements and this resource explains how to pick the appropriate materials

The Identification of Plastics and Rubbers Keith J. Saunders, 1966

Plastics, Rubber and Health Guneri Akovali, 2007 In recent years there have been certain scare stories about the possible negative effects on human health from some of these materials However today it is realised that it is often not the polymers themselves but their monomers or the additives used that are responsible for these negative effects And the reality is that a lot of polymers are used in medical applications without adverse effects on patients Hence the dividing line between whether something is toxic and harmful to health or not and if it is under what conditions is a very critical issue and therefore there needs to be a better understanding of these systems This book presents the available information on the eternal triangle of plastics and rubber and health to enable a better understanding of the facts

Fibres, Films, Plastics and Rubbers W.J. Roff, J.R. Scott, 2013-10-22 *Fibres Films Plastics and Rubbers A Handbook of Common Polymers* focuses on polymeric materials The book first discusses a list of sections on individual polymers Topics include olefin and vinyl type carbohydrate type synthetic condensation type organo silicon and inorganic polymers as well as proteins The text also looks at list of sections on specific properties and related information The book then discusses polyethylenes polypropylene and polytetrafluoroethylene The text also examines polystyrene Concerns include the structure chemistry physics fabrication serviceability and utilization of these materials The text also focuses on indene and coumarone indene resins polyvinyl acetate and alcohol polyvinyl formal acetal and butyral and polyacrylates and polymethacrylates The book then examines the structure chemistry physics fabrication serviceability and utilization of polyvinyl chloride polyvinylidene chloride cellulose and cellulose acetate The book also discusses the structure chemistry physics fabrication serviceability and utilization of cellulose nitrate cellulose ethers starch and regenerated proteins Same type of evaluation is also done to polyamides epoxy resins polyformaldehyde natural rubber and nitrile rubbers The text is a valuable source of information for readers interested in polymeric materials

Polymer Science and Technology of Plastics and Rubbers Premamoy Ghosh, 1990

Failure of Plastics and Rubber Products D. Wright, 2001-06 Plastics and rubbers together make up the most adaptable and varied class of materials available to product designers They may be transparent or opaque rigid or flexible lightweight insulating and weatherproof They are used in almost every industry and in every part of the home Applications range from the humble hot water bottle to the sheathing on a high voltage cable and from a simple scrubbing brush to a tank for storing hydrochloric acid Products may be disposable e g packaging goods or intended to last for decades such as a buried sewage pipe However it is this very diversity which makes materials selection so difficult and appropriate design so important Indeed the one thing that all these particular products have in common is their presence in this book of

failures Failures due to degradation may result from exposure to the weather or an aggressive operating environment Alternatively they may be caused by the introduction of an external agent unforeseen by the product designer They may be rapid or very slow and they may result from a combination of factors In this book Dr Wright describes the following mechanisms of polymer degradation and then illustrates each failure mechanism with a number of case studies Thermo oxidation Photo oxidation Degradation due to ionising radiation Chemical attack Environmental stress cracking Other miscellaneous effects including treeing electrochemical degradation and biodegradation Many of the case studies are based on Dr Wrights own experiences whilst working at Rapra In each case he describes the circumstances of the failure and discusses both the consequences of the failure and the lessons that may be learned from it Most of the failed products are familiar to us all and his style is both readable and informative Photographs are included where available The book will be essential reading for designers engineers product specifiers and forensic engineers Materials suppliers and processors will also benefit from the pragmatic analysis and advice it contains It will also be of value to all students of polymer science and technology providing an essential insight into the practical application of plastics and rubbers and the potential problems Finally it will be of interest to a much broader readership including anyone who ever wondered why things break and it should become a standard reference work in all technical libraries This book was written with the support of the UK Department of Trade and Industry It is intended to raise awareness of the causes and consequences of polymer product failures in order to reduce the future incidences of such failures and their considerable costs to industry
