concepts of meaning and truth in Paul of Venice's *Logica parva* a popular scholastic textbook in the Quattrocento To advance recent research on language pedagogy in the Renaissance it clarifies the connections between truth and translation and shows how scholastic logic performed an essential task in the early modern university it was a translational language that enabled students who spoke mainly their regional vernaculars to learn the language of university discourse A conclusion reviews some major themes of the study e.g. linguistic determinism and relativity vernacularity and translation semantical vs epistemic truth and evaluates the achievements of humanism and scholasticism according to appropriate criteria for a perfect language
