Patterns and Processes in the History of Life, 1986 **Patterns and Processes in the History of Life** D. Jablonski, D.M. Raup, 2012-12-06 Hypothesis testing is not a straightforward matter in the fossil record and here too interactions with biology can be extremely profitable Quite simply predictions regarding long term consequences of processes observed in living organisms can be tested directly using paleontological data if those living organisms have an adequate fossil record thus avoiding the pitfalls of extrapolative approaches We hope to see a burgeoning of this interactive effort in the coming years Framing and testing of hypotheses in paleontological subjects inevitably raises the problem of inferring process from pattern and the consideration and elimination of a broad range of rival hypotheses is an essential procedure here In a historical science such as paleontology the problem often arises that the events that are of most interest are unique in the history of life For example replication of the metazoan radiation at the beginning of the Cambrian is not feasible However decomposition of such problems into component hypotheses may at least in part alleviate this difficulty For example hypotheses built upon the role of species packing might be tested by comparing evolutionary dynamics both morphological and taxonomic during another global diversification such as the biotic rebound from the end Permian extinction which removed perhaps 95% of the marine species see Valentine this volume The subject of extinction and mass extinction in particular has become important in both paleobiology and biology **Patterns and Processes in the History of Life** D.M. Raup, D. Jablonski, 1986-11-01 Hypothesis testing is not a straightforward matter in the fossil record and here too interactions with biology can be extremely profitable Quite simply predictions regarding long term consequences of processes observed in living organisms can be tested directly using paleontological data if those living organisms have an adequate fossil record thus avoiding the pitfalls of extrapolative approaches We hope to see a burgeoning of this interactive effort in the coming years Framing and testing of hypotheses in paleontological subjects inevitably raises the problem of inferring process from pattern and the consideration and elimination of a broad range of rival hypotheses is an essential procedure here In a historical science such as paleontology the problem often arises that the events that are of most interest are unique in the history of life For example replication of the metazoan radiation at the beginning of the Cambrian is not feasible However decomposition of such problems into component hypotheses may at least in part alleviate this difficulty For example hypotheses built upon the role of species packing might be tested by comparing evolutionary dynamics both morphological and taxonomic during another global diversification such as the biotic rebound from the end Permian extinction which removed perhaps 95% of the marine species see Valentine this volume The subject of extinction and mass extinction in particular has become important in both paleobiology and biology *Deutsche Nationalbibliographie und Bibliographie des im Ausland erschienenen deutschsprachigen Schrifttums*, 1987 [The Architecture of Evolution](#) Marco Tamborini, 2022-12-20 In the final decades of the twentieth century the advent of evolutionary developmental biology evo

devo offered a revolutionary new perspective that transformed the classical neo Darwinian gene centered study of evolution In The Architecture of Evolution Marco Tamborini demonstrates how this radical innovation was made possible by the largely forgotten study of morphology Despite the key role morphology played in the development of evolutionary biology since the 1940s the architecture of organisms was excluded from the Modern Evolutionary Synthesis And yet from the beginning of the twentieth century to the 1970s and 80s morphologists sought to understand how organisms were built and how organismal forms could be generated and controlled The generation of organic form was they believed essential to understanding the mechanisms of evolution Tamborini explores how the development of evo devo and the recent organismal turn in biology involved not only the work of morphologists but those outside the biological community with whom they exchanged their data knowledge and practices Together with architects and engineers they worked to establish a mathematical and theoretical basis for the study of organic form as a mode of construction developing and reinterpreting important notions that would play a central role in the development of evolutionary developmental biology in the late 1980s This book sheds light not only on the interdisciplinary basis for many of the key concepts in current developmental biology but also on contributions to the study of organic form outside the English speaking world **An Unnatural History of Religions** Leonardo

Ambasciano,2018-12-27 An Unnatural History of Religions examines the origins development and critical issues concerning the history of religion and its relationship with science The book explores the ideological biases logical fallacies and unwarranted beliefs that surround the scientific foundations or lack thereof in the academic discipline of the history of religions positioning them in today s post truth culture Leonardo Ambasciano provides the necessary critical background to evaluate the most important theories and working concepts dedicated to the explanation of the historical developments of religion He covers the most important topics and paradigm shifts in the field such as phenomenology postmodernism and cognitive science These are taken into consideration chronologically each time with case studies on topics such as shamanism gender biases ethnocentrism and biological evolution Ambasciano argues that the roots of post truth may be deep in human biases but that historical justifications change each time resulting in different combinations The surprising rise of once fringe beliefs such as conspiracy theories pseudoscientific claims and so called scientific creationism demonstrates the alarming influence that post truth ideas may exert on both politics and society Recognising them before they spread anew may be the first step towards a scientifically renewed study of religion *Los Alamos Science* ,1988 *Books in Series*, 1876-1949 R.R. Bowker Company,1982 **Bibliographie der Bibliographien** ,1988 On the Origin of Autonomy Bernd

Rosslénbroich,2014-04-15 This volume describes features of autonomy and integrates them into the recent discussion of factors in evolution In recent years ideas about major transitions in evolution are undergoing a revolutionary change They include questions about the origin of evolutionary innovation their genetic and epigenetic background the role of the phenotype and of changes in ontogenetic pathways In the present book it is argued that it is likewise necessary to question

the properties of these innovations and what was qualitatively generated during the macroevolutionary transitions The author states that a recurring central aspect of macroevolutionary innovations is an increase in individual organismal autonomy whereby it is emancipated from the environment with changes in its capacity for flexibility self regulation and self control of behavior The first chapters define the concept of autonomy and examine its history and its epistemological context Later chapters demonstrate how changes in autonomy took place during the major evolutionary transitions and investigate the generation of organs and physiological systems They synthesize material from various disciplines including zoology comparative physiology morphology molecular biology neurobiology and ethology It is argued that the concept is also relevant for understanding the relation of the biological evolution of man to his cultural abilities Finally the relation of autonomy to adaptation niche construction phenotypic plasticity and other factors and patterns in evolution is discussed The text has a clear perspective from the context of systems biology arguing that the generation of biological autonomy must be interpreted within an integrative systems approach
