Muckler,1961 Transfer of training was studied as a function of simulated aircraft longitudinal dynamics Subjects performed single dimension compensatory tracking with long period phugoid oscillatory control system dynamics Two experiments are reported dealing with changes in course complexity and amplitude of the experimental stimulus forcing function Increasing course complexity substantially affected transfer of training but not training performance Increasing course amplitude affected training performance but not transfer of training In general transfer effects were greater from less difficult to more difficult task conditions These results are superficially inconsistent with previously reported studies However many of the phenomena are directly attributable to the presence of complex system dynamics which were absent in prior studies Author **Die deutschen Heldensagen** Gotthold Klee,1894
